Introducing the Stars Martin Beech, 2019-03-28 This textbook introduces the reader to the basic concepts and equations that describe stellar structure Various approximation techniques are used to solve equations and an intuitive rather than rigorous approach is employed to interpret the properties of the stars The book provides step by step instructions helpful exercises and relevant historical lessons to familiarize students with key concepts and mathematical theories Based upon a series of one semester 12 weeks elective undergraduate courses offered at the University of Regina this book is intended for students who are interested in seeing how basic calculus and introductory physics can be applied to the understanding of the stars from their formation to their death The text provides an intermediate stepping stone between lower level undergraduate classes and more specialized postgraduate texts on the subject of stellar structure *The Origin of Stars and Planetary Systems* Charles J. Lada, N.D. Kylafis, 2012-12-06 A few years after the publication of *The Physics of Star Formation and Early Stellar Evolution* we received a request from the publisher for an up dated second edition of this popular reference book As originally intended the volume had proved to be a useful text book for graduate astronomy courses and seminars which dealt with topics related to stellar origins The book was based on a series of lectures delivered by a distinguished group of leading researchers at a NATO Advanced Study Institute ASI held in May 1990 on the island of Crete Greece The primary goal of the ASI was in fact to produce a book which would simultaneously provide a broad and systematic overview of as well as a rigorous introduction to the fundamental physics and astronomy at the heart of modern research in star formation and early stellar evolution However by 1995 concern had arisen among those who used the text as a reference for graduate seminars and courses that the book would need to be updated to stay abreast of the discoveries and

progress in this rapidly evolving field After some discussion we concluded that a new edition of the book was warranted and that the goal of producing a new edition would be best accomplished by organizing a second ASI in Crete to review the progress in star formation research

Instabilities in Luminous Early Type Stars Henny J.G.L.M. Lamers,C. de Loore,2012-12-06 On April 28 1986 Cornelis de Jager reached the age of 65 years On April 30 he officially retired from the University of Utrecht where he has held a Chair for Stellar Astrophysics later changed into Space Physics since 1958 Cees de Jager as he prefers to be called by his friends has had an active and successful life in science His interest in astronomy was raised by his father under the clear skies of Celebes Indonesia He started a study in physics and astronomy as a student of the late M Minnaert in Utrecht during World War II When in 1943 the occupying forces recruited students who did not want to sign the declaration of loyalty for their war efforts Cees and three fellow students went into hiding at the Observatory in Utrecht During this very quiet period van de Hulst developed the theory of the 21 cm radiation of neutral hydrogen and de Jager started the observations of variable stars in the pitch dark nights of a country at war The study of Beta Cepheids rapidly awoke his interest which was kept throughout the years In 1958 he organized an international campaign to observe 12 Lac spectroscopically and photometrically which was a great success

High-Redshift Galaxies Immo Appenzeller,2009-06-17 The high redshift galaxies became a distinct research field during the final decade of the 20th century At that time the Lyman break technique made it possible to identify significant samples of such objects and the new generation of 8 to 10 m telescopes resulted in the first good spectroscopic data Today the high redshift galaxies have developed into one of the important topics of astrophysics accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy Because high redshift galaxies is a rapidly developing field and since new results are published constantly writing a book on this topic is challenging On the other hand in view of the large amount of individual results now in the literature and in view of the still growing interest in this topic it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field or who for various reasons might be interested in its results The end of the first decade of the 21st century appears to be a good point in time to attempt such a summary The current generation of ground based 8 to 10 m optical telescopes the Hubble Space Telescope and the most important large radio telescopes have by now been in operation since about one or two

decades Although these instruments will continue to produce important scientific results for some time to come many of the initial programs exploiting their unique new possibilities have been completed *Astronomy For Dummies* Stephen P. Schmadel, Gert Zech, 2013-04-18 *An Introduction to Planetary Nebulae* Jason J. Nishiyama, 2018-05-25 In this book we will look at what planetary nebulae are where they come from and where they go We will discuss what mechanisms cause these beautiful markers of stellar demise as well as what causes them to form their variety of shapes How we measure various aspects of planetary nebulae such as what they are made of will also be explored Though we will give some aspects of planetary nebulae mathematical treatment the main points should be accessible to people with only a limited background in mathematics A short glossary of some of the more arcane astronomical terms is at the end of the book to help in understanding Included at the end of each chapter is an extensive bibliography to the peer reviewed research on these objects and I would encourage the reader interested in an even deeper understanding to read these articles **Luminous Stars and Associations in Galaxies** International Astronomical Union.
