When Water Flows Uphill:

Cadillac Desert Marc Reisner, 1993-06-01 I've been thinking a lot about Cadillac Desert in the past few weeks as the rain fell and fell and kept falling over California much of which despite the pouring heavens seems likely to remain in the grip of a severe drought Reisner anticipated this moment He worried that the West's success with irrigation could be a mirage that it took water for granted and didn't appreciate the precariousness of our capacity to control it Farhad Manjoo The New York Times January 20 2023 The definitive work on the West's water crisis Newsweek The story of the American West is the story of a relentless quest for a precious resource water It is a tale of rivers diverted and dammed of political corruption and intrigue of billion dollar battles over water rights of ecological and economic disaster In his landmark book Cadillac Desert Marc Reisner writes of the earliest settlers lured by the promise of paradise and of the ruthless tactics employed by Los Angeles politicians and business interests to ensure the city's growth He documents the bitter rivalry between two government giants the Bureau of Reclamation and the U S Army Corps of Engineers in the competition to transform the West Based on more than a decade of research Cadillac Desert is a stunning expose and a dramatic intriguing history of the creation of an Eden an Eden that may only be a mirage This edition includes a new postscript by Lawrie Mott a former staff scientist at the Natural Resources Defense Council that updates Western water issues over the last two decades including the long term impact of climate change and how the region can prepare for the future

Water Wars Vandana Shiva, 2002 The world's most prominent radical scientist The Guardian Vandana Shiva a world renowned environmentalist and campaigner examines the e water wars of the twenty first century the aggressive privatization by the multinationals of communal water rights While drought and desertification are intensifying around the world corporations are aggressively converting free flowing water into bottled profits The water wars of the twenty first century may match or even surpass the oil wars of the twentieth In Water Wars Privatization Pollution and Profit acclaimed author Vandana Shiva sheds light on the activists who are fighting corporate manoeuvres to convert this life sustaining resource into more gold for the elites In Water Wars Shiva uses her remarkable knowledge of science and society to outline the emergence of corporate culture and the historical erosion of communal water rights Using the international water trade and industrial activities such as damming mining and aquafarming as her lens Shiva exposes the destruction of the earth and the disenfranchisement of the world's poor as they are stripped of rights to a precious common good Shiva calls for a movement to preserve water access for all and offers a blueprint for global resistance based on examples of successful campaigns

Restoring Colorado River Ecosystems Robert W. Adler, 2012-06-22 Over the past century humans have molded the Colorado River to serve their own needs resulting in significant impacts to the river and its ecosystems Today many

scientists public officials and citizens hope to restore some of the lost resources in portions of the river and its surrounding lands Environmental restoration on the scale of the Colorado River basin is immensely challenging in addition to an almost overwhelming array of technical difficulties it is fraught with perplexing questions about the appropriate goals of restoration and the extent to which environmental restoration must be balanced against environmental changes designed to promote and sustain human economic development Restoring Colorado River Ecosystems explores the many questions and challenges surrounding the issue of large scale restoration of the Colorado River basin and of large scale restoration in general Robert W Adler evaluates the relationships among the laws policies and institutions governing use and management of the Colorado River for human benefit and those designed to protect and restore the river and its environment He examines and critiques the often challenging interactions among law science economics and politics within which restoration efforts must operate Ultimately he suggests that a broad concept of restoration is needed to navigate those uncertain waters and to strike an appropriate balance between human and environmental needs While the book is primarily about restoration of Colorado River ecosystems it is also about uncertainty conflict competing values and the nature pace and implications of environmental change It is about our place in the natural environment and whether there are limits to that presence we ought to respect And it is about our responsibility to the ecosystems we live in and use

Knight,1999 An overview from 1999 of a general introduction to glacier study **The Routledge International Handbook of the Crimes of the Powerful** Gregg Barak,2015-06-05 Across the world most people are well aware of ordinary criminal harms to person and property Often committed by the powerless and poor these individualized crimes are catalogued in the statistics collected annually by the FBI and by similar agencies in other developed nations In contrast the more harmful and systemic forms of injury to person

and property committed by powerful and wealthy individuals groups and national states are neither calculated by governmental agencies nor annually reported by the mass media As a result most citizens of the world are unaware of the routinized crimes of the powerful even though they are more likely to experience harms and injuries from these types of organized offenses than they are from the atomized offenses of the powerless Research on the crimes of the powerful brings together several areas of criminological focus involving organizational and institutional networks of powerful people that commit crimes against workers marketplaces taxpayers and political systems as well as acts of torture terrorism and genocide This international handbook offers a comprehensive authoritative and structural synthesis of these interrelated topics of criminological concern It also explains why the crimes of the powerful are so difficult to control Edited by internationally acclaimed criminologist Gregg Barak this book reflects the state of the art of scholarly research covering all the key areas including corporate global environmental and state crimes The handbook is a perfect resource for students and researchers engaged with explaining and controlling the crimes of the powerful domestically and internationally

Water Bankruptcy in the Land of Plenty Franck Poupeau,Hoshin Gupta,Aleix Serrat-Capdevila,Maria Sans-Fuentes,Susan Harris,László G. Hayde,2017-12-21 As the American Southwest faces its deepest drought in history this book explores the provocative notion of water bankruptcy with a view towards emphasizing the diversity and complexity of water issues in this region It bridges between the narratives of growth and the strategies or policies adopted to pursue competing agendas and circumvent the inevitable A window of opportunity provided by this current long term drought may be used to induce change by dealing with threats that derive from imbalances between growth patterns and available resources the primary cause of scarcity A first of its kind this book was developed through close collaboration of a broad range of natural scientists social scientists and resource managers from Europe and United States It constitutes a collective elaboration of a transdisciplinary approach to unveiling the inner workings of how water was fought for allocated and used in the American Southwest with a focus on Arizona Specifically it offers an innovative scientific perspective that produces a critical diagnostic evaluation of water management with a particular view to identifying risks for the Tucson region that is facing continuous urban sprawl and economic growth
