

To add a keyboard shortcut for a script, choose **Edit > Keyboard Shortcuts**, select an editable shortcut set from the **Set** menu, then choose **Product Area > Scripts**. A list of the scripts in your **Scripts** panel appears. Select a script and assign a keyboard shortcut as you would for any other InDesign feature.

About Scripting Languages

The language you use to write scripts depends on the scripting system of your platform: AppleScript for Mac OS, VBScript for Windows, or JavaScript for either platform. Although the scripting languages differ, the ways they work with InDesign are very similar.

Each sample script in this document is shown in all three scripting languages. Translating a script from one language to another is fairly easy.

JavaScript

InDesign supports JavaScript for cross-platform scripting in both Mac OS and Windows. InDesign's JavaScript support is based on an Adobe implementation of JavaScript known as ExtendScript. The ExtendScript interpreter conforms to the current ECMA 262 standard for JavaScript. All language features of JavaScript 1.5 are supported. Adobe Illustrator®, Adobe Photoshop®, and other Adobe Creative Suite® products also use the ExtendScript JavaScript interpreter.

While you can write scripts using other versions of JavaScript, like Microsoft® JScript (in Windows) or Late Night Software's DSA JavaScript (on the Mac OS), the terms you use in those languages are not the same as the terms you use in ExtendScript. ExtendScript examples do not work in other JavaScript versions.

Note: Because ExtendScript tools and features are used in several Adobe products, we consolidated all ExtendScript documentation. To learn more about JavaScript utilities like the ScriptUI user-interface module and the ExtendScript Toolkit (a JavaScript development environment and object model inspector), see *Creative Suite 3 JavaScript Tools Guide*.

Mac OS

To use InDesign scripting on Mac OS, you can use either JavaScript or AppleScript. To write AppleScripts, you must have AppleScript version 1.6 or higher and an AppleScript script editor. AppleScript comes with all Apple® systems, and it can be downloaded free from the Apple Web site. The Apple Script Editor is included with the Mac OS; third-party script editors, like Script Debugger (from Late Night Software, <http://www.latenightsw.com/>) also are available.

Windows

To use InDesign scripting in Windows, you can use either JavaScript or some version of Microsoft Visual Basic, like VBScript.

The Visual Basic tutorial scripts are written in VBScript. We chose VBScript because no added software is required to run or edit VBScripts; you can edit them with any text editor (like Notepad) and run them using the InDesign Scripts panel.

Other versions of Visual Basic include Visual Basic 3 Control-Creation Edition (CCE), Visual Basic 6, Visual Basic .NET, and Visual Basic 2005 Express Edition. Versions of Visual Basic prior to Visual Basic .NET work well with InDesign scripting. Visual Basic .NET and newer versions work less well, because they lack the **Variant** data type, which is used extensively in InDesign scripting.

Where Are Applescripts Referred To In Indesign Cscripting Guide:

AppleScript Automation Guide Richard Johnson, 2025-05-29 *AppleScript Automation Guide* The *AppleScript Automation Guide* is an authoritative and comprehensive resource for professionals and power users seeking to master macOS automation through AppleScript. Beginning with a meticulous exploration of AppleScript's architecture, language evolution, and integral role in the macOS ecosystem, the guide builds a strong understanding of scripting fundamentals, object models, flow control mechanisms, and robust error handling. Readers are expertly guided through both the foundational constructs and the nuanced behaviors of the AppleScript language, ensuring a clear pathway from novice curiosity to advanced competency. Advancing beyond the basics, the guide delves deep into practical and sophisticated automation patterns. It covers the creation of reusable script libraries, advanced data structuring, and orchestration of complex workflows across multiple applications, including third-party creative tools and macOS productivity suites. Special attention is given to scripting difficult or non-standard applications, event-driven design, and constructing resilient automation pipelines for system administration, security, and enterprise-scale deployment. Real-world scenarios are illuminated through extensive case studies demonstrating automation success in creative industries, IT DevOps, and beyond. The book also embraces the rich interoperability of AppleScript with the Unix shell, external languages such as Python and JavaScript for Automation, and integration with core automation tools like Automator, Services, and Shortcuts. Comprehensive chapters on testing, debugging, optimization, and enterprise deployment provide readers with the strategies required for secure, scalable, and maintainable automation solutions. With its forward-looking perspective on emerging trends and its commitment to community-driven innovation, the *AppleScript Automation Guide* is an essential companion for any professional intent on harnessing the full power of automation on the Apple platform.
