*Cellular and Molecular Biology of Plant Seed Development* Brian A. Larkins, Indra K. Vasil, 2013-03-09 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plants seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds

*Crop Improvement in the Era of Next-Generation Sequencing* Manohar Chakrabarti, Umesh K. Reddy, Nabanita Chattopadhyay, 2025-02-27 To feed the burgeoning world population global food production must increase drastically This is becoming more challenging with the imminent threats of global climate change especially the incidences of abiotic stresses such as drought heat and salinity are predicted to increase soon Global climate change may also affect plant biotic interactions Additionally modernization in underdeveloped and developing countries is expected to decrease available land for agricultural usage Thus to achieve sustainable agricultural development it is imperative to produce more food without using additional land and other valuable resources including water These necessitates should develop novel rapid and robust crop improvement methods that complement traditional plant breeding approaches Crop improvement strategies to tackle future challenges necessitate the elucidation of underlying genes and

gene regulatory networks The dwindling cost of next generation sequencing and the emergence of novel sequencing approaches such as long read sequencing technology e g PacBio Oxford Nanopore and others are transforming agricultural research at an unprecedented rate is opening a plethora of opportunities in turbocharging crop improvement initiatives Recent advances in next generation sequencing will continue to play a pivotal role in future crop improvement efforts However the progress of genomic technologies has not been uniformed world wide Thus it is now relevant to compile a collection of recent advancements in the field of structural functional and comparative genomics and its relevance to crop improvement so that it is disseminated to a broader audience
