Mesopotamian Planetary Astronomy-Astrology David Brown,2021-10-25 Pliny wrote of Babylon that here the creator of the science of astronomy was Excavations have shown this statement to be true This book argues that the earliest attempts at the accurate prediction of celestial phenomena are indeed to be found in clay tablets dating to the 8th and 7th centuries BC from both Babylon and from Nineveh The author carefully situates this astronomy within its cultural context treating all available material from the relevant period and also analysing the earlier astrological material and the later well known ephemerides and related texts A wholly new approach to cuneiform astral concerns emerges one in which both celestial divination and the later astronomy are shown to be embedded in a prevailing philosophy dealing with the ideal nature of the early universe and in which the dynamics of the celestial divination industry that surrounded the last Assyrian monarchs account for no less than the first recorded scientific revolution This work closely adheres to the original textual sources and argues for the evolution on the basis of the needs of the ancient scholars and the internal logic of the divinatory and predictive systems employed To this end it offers for the first time a Mesopotamian contribution to the philosophy and not only the history of science

Peterson's Annual Guides to Graduate Study Karen C. ed Hegener,1981

Scientific and Technical Aerospace Reports ,1994

Lunar Meteoroid Impacts and How to Observe Them Brian Cudnik,2010-03-10 The genesis of modern searches for observable meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938 In it he argued that the absence of observed fashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefied lunar atmosphere The paper suggested the possibility of systematic searches for such possible lunar meteors With these concepts in mind I was surprised to note a transient moving bright speck on the Moon on July 10 1941 It appeared to behave very much as a lunar meteor would except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity Thus the idea of systematic searches for both possible lunar meteors and meteoritic impact fashes was born It was appreciated that much time might need to be expended to achieve any positive results Systematic searches were carried out by others and myself chiefly in the years 1945 1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers or ALPO
