

PLANT REPRODUCTION

Reproduction in Gymnosperms

Gymnosperms are seed-bearing plants that do not produce flowers and fruits. They have a long life span and are mostly found in temperate and boreal regions of the world.

The male gametophyte is called the pollen grain, which is produced in the male cone. The female gametophyte is called the ovule, which is produced in the female cone.

The male cone is called the strobilus. It is a cluster of many small cones. Each small cone is called a microsporophyll. It bears a microspore, which develops into a male gametophyte.

The female cone is called the ovule. It is a cluster of many small cones. Each small cone is called a megasporophyll. It bears a megaspore, which develops into a female gametophyte.

Life Cycle of Gymnosperms

The life cycle of gymnosperms is as follows:

The life cycle of gymnosperms is a continuous cycle. It starts with a seedling, which grows into a young tree, then a mature tree, and finally a seedling again. The cycle is labeled with 'Seedling', 'Young tree', 'Mature tree', and 'Seedling'.
