Combinational Immunotherapy of Cancer: Novel Targets, Mechanisms, and Strategies Xuyao Zhang,Xian Zeng,Yubin Li,Dianwen Ju,2024-01-15 Cancer immunotherapy including immune checkpoint inhibitors ICIs and chimeric antigen receptor T cell CAR T therapy has revolutionized the paradigm in cancer treatment However the clinical outcome of immunotherapy varies considerably among patients and only a minority of patients achieve long term clinical benefits This is largely attributed to the fact that existing cancer immunotherapies which concentrate on several classical targets CTLA 4 PD 1 PD L1 etc and limited types of immune cell populations T cells are insufficient to cope with the complexity of highly heterogeneous tumor microenvironment TME This calls for more efforts to not only expand our toolbox for manipulating anticancer immunity but also diversify our combinational strategies To this end it is urgent to deeper our understanding of cancer immunotherapy by using both experimental and computational methodologies from multi scale perspectives 1 novel targets from either tumor cells or non tumor cells within TME e g tumor intrinsic resistance drivers new immune checkpoints neoantigens 2 in depth characterization of more immune cell populations e g macrophages Tregs B cells and their interactions and dynamics within TME 3 landscape of actionable targets in patient populations for combination design These

efforts will open the avenue of rational design of combinational immunotherapies allowing researchers and clinicians to design novel targeting therapeutics or to optimally orchestrate combinatory strategies aiming to surmount resistance mechanisms and improve clinical outcomes The Chemical News and Journal of Industrial Science ,1926 Photo-Driven Seawater Splitting for Hydrogen Production Xiao-Yu Yang,2023-04-29 This book presents photo driven seawater splitting technologies for hydrogen production This technology is considered as a win win interplay for both the utilization of solar energy as the most renewable energy and seawater as the most hydrogen source The book also discusses topics from raw materials selection characterization and mechanistic insights to the latest research developments in response to the need for environmentally friendly and low carbon industries In addition it provides insights into a most attractive energy conversion and storage cascade by combining solar energy and a hydrogen system Given its scope this book appeals to a broad readership particularly professionals at universities and scientific research institutes as well as practitioners in industry
