*Oxygen, Nitrogen and Sulfur Species in Post-Harvest Physiology of Horticultural Crops* Vasileios Ziogas, Francisco J. Corpas, 2023-11-01 *Oxygen, Nitrogen and Sulfur Species in Post-harvest Physiology of Horticultural Crops* a volume in the Plant Gasotransmitter series analyzes the latest advances in post-harvest physiology. The book presents metabolic cascades and highlights the role of gasotransmitters as intercellular regulators of metabolic processes. Post-harvest physiology differs between climacteric and non-climacteric fruits and vegetables as well as for fresh-cut flowers and non-food plants. Initial chapters review the cascades, intercellular pathways, and messenger molecules that drive ripeness and longevity, presenting the chemistry behind key pathways. The book also takes a deep dive into core gasotransmitters, describing the data behind known properties, chemistry, and physiological roles. Applications for prolonging shelf life via the control of post-harvest fungi

bacteria and omics approaches are reviewed in detail offering readers guidance on how to put gasotransmitters research into practice This is an essential resource for students researchers and agronomists interested in plant physiology biochemistry and plant hormones Describes the use and application of oxygen nitrogen and sulfur species towards the prolonging of post harvest shelf life in agricultural products Explores eco friendly alternatives to hazardous chemical compounds used to preserve fruits Presents metabolic cascades and evaluates the crosstalk and interaction of gasotransmitters within these cascades

Tissue culture as a plant production system for horticultural crops Richard H. Zimmerman,Robert J. Griesbach,Freddi A. Hammerschlag,R.H. Lawson,2012-12-06 In 1980 a conference on tissue culture of fruit crops was held at Beltsville to summarize the current status of this technology and to stimulate interest in it among research scientists students and commercial producers in the U S Interest in that conference and the proceedings from it far exceeded the expectations of the organizing committee Since that time micropropagation of fruit crops in the U S has increased significantly but still lags far behind applications to production of ornamental plants Within the past two years a number of new laboratories have been established and some of the existing laboratories have expanded to a size far larger than any previously anticipated Creation of new laboratories capable of producing more than 400 000 plants per week will test the ingenuity of laboratory managers and the skills of

marketing departments In recent years numerous symposia have been held on various aspects of biotechnology and genetic engineering Although micro propagation is the key to providing large numbers of genetically engineered plants it is a topic that has been relegated to a minor position or ignored completely at such meetings Accordingly the time seemed propitious for a conference devoted solely to all aspects of micropropagation as applicable to horticultural crops
