Reforming the Russian Industrial Workplace Elena Shulzhenko, 2017-04-21 Based on extensive original research this book explores how far the Soviet pattern of industrial workplace organisation characterised by a high level of management discretion authoritarian control and the use of punitive methods on the shop floor has been replaced by internationally established practices with a greater emphasis on a lean organisation and employee involvement in quality improvement The book explores how the market reforms of the 1990s raised companies attention to product quality but did not lead to a change in the management methods which only began with the increased internationalisation of the Russian economy in the 2000s The book includes a rich in depth study of multinational and domestic companies and argues that a move from the Soviet pattern of workplace organisation to new practices is only likely to occur in companies with strong ties to international partners who provide support for and audit the implementation and upholding of international management standards The research shows that local companies not exposed to such international collaboration continue with the old methods
