International Conference on Computing, Communication, Electrical and Biomedical Systems Arulmurugan Ramu,Chow Chee Onn,M.G. Sumithra,2022-02-28 This book presents selected papers from the International Conference on Computing Communication Electrical and Biomedical Systems ICCCEBS 2021 held in March 2021 at KPR College of Engineering and Technology Coimbatore Tamil Nadu India The conference explores the interface between industry and real time environments with newly developed techniques in computing and communications engineering The papers describe results of conceptual constructive empirical experimental and theoretical work in areas of computing communication electrical and biomedical systems Contributors include academic scientists researchers industry representatives postdoctoral fellows and research scholars from around the world **Expeditions in Mathematics** Tatiana Shubin,David F.

Hayes,Gerald L. Alexanderson,2011 This book is the second volume based on lectures for pre college students given by prominent mathematicians in the Bay Area Mathematical Adventures BAMA This book reflects the flavor of the BAMA lectures and the excitement they have generated among the high school and middle school students in the Silicon Valley The topics cover a wide range of mathematical subjects each treated by a leading proponent of the subject at levels designed to challenge and attract students whose mathematical interests are just beginning In addition the treatments given here will intrigue and enchant a more mature mathematician It is hoped that the publication of these lectures will expose students outside of the San Francisco Bay Area to interesting mathematical topics and treatments outside of their normal experience in the classroom Mathematical educators are encouraged to offer the students in their own localities similar opportunities to come into contact with exciting adventures in mathematics Applied Mathematics, Modeling and Computer Simulation

C.-H. Chen,A. Scapellato,A. Barbiero,Dmitry Korzun,2022-12-20 Applied mathematics together with modeling and computer simulation is central to engineering and computer science and remains intrinsically important in all aspects of modern technology This book presents the proceedings of AMMCS 2022 the 2nd International Conference on Applied Mathematics Modeling and Computer Simulation held in Wuhan China on 13 and 14 August 2022 with online presentations available for those not able to attend in person due to continuing pandemic restrictions The conference served as an open forum for the sharing and spreading of the newest ideas and latest research findings among all those involved in any aspect of applied mathematics modeling and computer simulation and offered an ideal platform for bringing together researchers practitioners scholars professors and engineers from all around the world to exchange the newest research results and stimulate scientific innovation More than 150 participants were able to exchange knowledge and discuss the latest developments at the conference The book contains 127 peer reviewed papers selected from more than 200 submissions and ranging from the

theoretical and conceptual to the strongly pragmatic all addressing industrial best practice Topics covered included mathematical modeling and application engineering applications and scientific computations and simulation of intelligent systems The book shares practical experiences and enlightening ideas and will be of interest to researchers and practitioners in applied mathematics modeling and computer simulation everywhere

Advanced Experimental and Numerical Techniques for Cavitation Erosion Prediction Ki-Han Kim, Georges Chahine, Jean-Pierre Franc, Ayat Karimi, 2014-07-08 This book provides a comprehensive treatment of the cavitation erosion phenomenon and state of the art research in the field It is divided into two parts Part 1 consists of seven chapters offering a wide range of computational and experimental approaches to cavitation erosion It includes a general introduction to cavitation and cavitation erosion a detailed description of facilities and measurement techniques commonly used in cavitation erosion studies an extensive presentation of various stages of cavitation damage including incubation and mass loss and insights into the contribution of computational methods to the analysis of both fluid and material behavior The proposed approach is based on a detailed description of impact loads generated by collapsing cavitation bubbles and a physical analysis of the material response to these loads Part 2 is devoted to a selection of nine papers presented at the International Workshop on Advanced Experimental and Numerical Techniques for Cavitation Erosion Prediction Grenoble France 1 2 March 2011 representing the forefront of research on cavitation erosion Innovative numerical and experimental investigations illustrate the most advanced breakthroughs in cavitation erosion research

Linear Prediction Theory Peter Strobach, 2012-12-06 Linear prediction theory and the related algorithms have matured to the point where they now form an integral part of many real world adaptive systems When it is necessary to extract information from a random process we are frequently faced with the problem of analyzing and solving special systems of linear equations In the general case these systems are overdetermined and may be characterized by additional properties such as update and shift invariance properties Usually one employs exact or approximate least squares methods to solve the resulting class of linear equations Mainly during the last decade researchers in various fields have contributed techniques and nomenclature for this type of least squares problem This body of methods now constitutes what we call the theory of linear prediction The immense interest that it has aroused clearly emerges from recent advances in processor technology which provide the means to implement linear prediction algorithms and to operate them in real time The practical effect is the occurrence of a new class of high performance adaptive systems for control communications and system identification applications This monograph presumes a background in discrete time digital signal processing including Z transforms and a basic knowledge of discrete time random processes One of the difficulties I have encountered while writing this book is that many engineers and computer scientists lack knowledge of fundamental mathematics and geometry

Computational Mathematics and Modelling for Diabetes Abdesslam Boutayeb, Mohamed E.N. Lamlili, 2025-06-29 This book is a theoretical and pragmatic tool that applies mathematical modelling in understanding and managing diabetes and related

complications such as diabetes predisposition diabetes onset regular glycaemic monitoring glycated haemoglobin HbA1c diabetes homeostasis gestational diabetes and other associated diseases and conditions Chapters in the book provide mathematical models dealing with the dynamics of insulin glucose the evolution from pre diabetes to diabetes without and with complications gestational diabetes and the association between diabetes and benign prostatic hyperplasia It also applies new methods such as data mining machine learning and deep learning By offering pragmatic examples and comprehensive reviews on mathematical models used for diabetes this book is useful for advanced researchers academic teachers students scientists and high pharmaceutical industry executives willing to start modelling

Economic Information, Decision, and Prediction M. Marschak, 2012-12-06 The papers of Jacob Marschak which follow in these volumes are an extraordinary combination of original and fruitful departures in economic and social thought superb clarity of exposition and sensitivity to the values of earlier work and even competing traditions They make us marvel alike at their variety their quantity and their quality But they do not even so fully reflect Marschak's contributions to the development of social science He has had an unusual influence as one who exercises leadership In a formal organizational sense this role has been manifest in his capacity as Director of the Cowles Commission for Research in Economics then at the University of Chicago in that organization's most productive and influential period and later in his central role in the Western Management Science Institute at the University of California at Los Angeles I can speak from first hand knowledge about the first His special capacities are first the recognition of promising new concepts and of promising young scholars and second getting his colleagues to join him in developing the ideas and involving them fully in the necessary tasks There was an unusual combination of strength and humility in his methods a display of force in pushing the work along but a willingness almost an insistence on treating even the most junior associate as a fully equal colleague in intellectual development whose criticism of himself was to be encouraged His leadership has been exercised in the absence of formal positions
