respect to integration over the boundary and some related questions They give a detailed account of the derivation of the Bochner Martinelli Koppelman integral representation of exterior differential forms which was obtained in 1967 and has already found many important applications They study the properties of overline partial closed forms of type $p \wedge \bar{q}$ $0 \leq p \leq n$ $0 \leq q \leq n$ which turn out to be the duals with respect to the orthogonality mentioned above to holomorphic functions or forms in several complex variables and resemble holomorphic functions of one complex variable in their properties *Catalog of Copyright Entries.
