

# Genetics Problem Solving

Please bring your textbook to this laboratory session.

## A. Objectives

Become familiar with

1. Probability calculations
2. Solving genetics problems

## B. Before lab

3. Read *Probability is used to predict inheritance and Mendel's laws can be observed in human pedigrees* on pages 150-151 of your textbook. Also, review linked genes and the construction of genetic maps on pages 156-158.
4. In your notebook, answer questions 1-3, 11, and 21 - 23 in part E below.

## C. During lab

In groups of four, work through the genetics problems. You can fill your answers directly into the worksheet. However, remember to include this exercise in the table of content of your lab notebook, glue the pages in and have them signed by your instructor.

## D. After lab

1. Finish the worksheet if you have not done it in lab.
2. Practice solving genetics problems (e.g.,  
<http://www.ndsu.nodak.edu/instruct/mcclean/plsc431/mendel/mendel1.htm>)

## E. Predicting the outcome of various crosses

1. A female carrier of Tay-Sachs wants to have a child with a male carrier for Tay-Sachs. Tay-Sachs is inherited in an autosomal recessive manner. Using the letters "T" and "t" fill out the following table.

	Female	Male
Genotype		
Phenotype		
Genotypes of sperm/ova		

2. Determine the probability of them having a child with Tay-Sachs using a Punnett square (page 147 in Hillis).

Problem Solving Handbook in Computational Biology and Bioinformatics Lenwood S. Heath, Naren Ramakrishnan, 2010-10-20 Bioinformatics is growing by leaps and bounds theories algorithms statistical techniques are constantly evolving Nevertheless a core body of algorithmic ideas have emerged and researchers are beginning to adopt a problem solving approach to bioinformatics wherein they use solutions to well abstracted problems as building blocks to solve larger scope problems Problem Solving Handbook for Computational Biology and Bioinformatics is an edited volume contributed by world renowned leaders in this field This comprehensive handbook with problem solving emphasis covers all relevant areas of computational biology and bioinformatics Web resources and related themes are highlighted at every opportunity in this central easy to read reference Designed for advanced level students researchers and professors in computer science and bioengineering as a reference or secondary text this handbook is also suitable for professionals working in this industry      **Prentice Hall Science** Anthea Maton, Jill D. Wright, Jean Hopkins, Susan Johnson, David Lahart, Maryanna Quon Warner, 1994      *Problem Solving through Precision Oncology* Peter Selby, 2016-11-07 Winner of the BMA Oncology Book of the Year Award This practical learning and reference handbook provides an overview of the latest progress in the developing field of precision oncology plus a ground breaking collection of case studies Problems showing precision oncology in practice The book includes a clear readable summary of developments alongside real life case studies providing a valuable update for all involved in the oncology community The editors lead research and clinical teams at four UK centres of excellence in the field      *Resources for Teaching Middle School Science* Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-03-30 With age appropriate inquiry centered curriculum materials and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them Resources for Teaching Middle School Science developed by the National Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8 The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards This completely new guide follows on the success of Resources for Teaching Elementary School Science the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers The curriculum materials in the new guide are grouped in five chapters by scientific area Physical Science Life Science Environmental Science Earth and Space Science and Multidisciplinary and Applied Science They are also grouped by type core materials supplementary units and science activity books Each annotation of curriculum material includes a recommended grade level a description of the activities involved and of what students can be expected to learn a list of accompanying materials a reading level and ordering information The curriculum materials included in this book were

selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, *Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents. *Prentice Hall Exploring Life Science*, Anthea Maton, 1997. *Tools, Methodologies and Techniques Applied to Sustainable Supply Chains*, Jorge Luis

García-Alcaraz, 2020-02-21. Supply chains are currently globalized, and companies operate internationally owing to the fact that raw materials production processes and the consumption of the final products are carried out in different countries. This implies high material and information flow, which incurs high costs associated with the supply chain and logistics, sometimes up to 60% of the total cost of the product. Therefore, companies seek to optimize their resources to reduce these costs and improve sustainability in a globalized market. This book, entitled *Tools, Methodologies and Techniques Applied to Sustainable Supply Chains*, contains 15 chapters that report case studies applied to industrial and service sectors. The authors come from areas such as Mexico, Colombia, Italy, Sweden, Slovakia, China, and Australia. They indicate how managers make use of tools and techniques to solve problems associated with supply chains to reduce their cost and remain competitive. A great effort has been made to analyze this problem, and the methodologies are clearly described here to facilitate the reproducibility of each technique and tool. This was done in the hope that, one day, they may be applied in more companies.

**Genetics and the Behavior of Domestic Animals**, Temple Grandin, Mark J. Deesing, 2013-04-22. The partnership between humans and domestic animals is natural. The human brain is hard-wired to emotionally respond to animals. Beginning with the domestication of wolves, this chapter covers the process of domestication and reviews the early work of behaviorists and ethologists who refused to accept emotional states in animals. Modern behavior research employs methods developed by behaviorists and ethologists combined with neuroscience and genetics. Emotional systems in the brain drive behavior. Confusion between different emotional systems may explain conflicting findings in the behavior literature. Behavior in an open field test may be motivated either by fear, separation distress, or novelty seeking. Each emotion is controlled by separate subcortical systems. A novel open field arena can frighten a prey species, but it may activate seeking in a predator.

Genetics affects the strength of fear novelty seeking and separation distress Behavior is shaped by a complex interaction between genetics and experience      **Basic Genetics** Robert F. Weaver, Philip W. Hedrick, 1995 This text provides a balanced coverage of clinical and molecular genetics Experimental highlights and extensive use of learning aids are used throughout After a broad introduction to the topic the book is divided into 3 parts Part one explores Mendelian genetics including chromosomes and genetic linkage Part two looks at molecular genetics covering chemistry of a gene replation and recombination of genes and transcription and its control in prokaryotes The final part introduces population genetics and discusses some of their extensions and applications      Solving Equine Behaviour Problems Rose M. Scofield, 2020-09-22 Horses can develop a range of behavioural problems which if left untreated could cause the relationship between horse and human to break down With many different well meaning opinions offered to solve such situations it can be difficult to find the right path In this book Rose Scofield examines behavioural issues using the latest academic research Offering practical solutions and with useful diagrams and photographs throughout the book helps to protect and develop the horse human relationship      **Nuclear Science Abstracts** , 1971-03      **Pedagogical Seminary and Journal of Genetic Psychology** Granville Stanley Hall, Carl Murchison, 1924 Vols 5 15 include Bibliography of child study By Louis N Wilson      **Intelligent Systems** Bogdan M.
