**Virtual Fundamental Cycles in Symplectic Topology** John W. Morgan, Dusa McDuff, Mohammad Tehrani, Kenji Fukaya, Dominic Joyce, 2019-04-12 The method of using the moduli space of pseudo holomorphic curves on a symplectic manifold was introduced by Mikhail Gromov in 1985 From the appearance of Gromov's original paper until today this approach has been the most important tool in global symplectic geometry To produce numerical invariants of these manifolds using this method requires constructing a fundamental cycle associated with moduli spaces This volume brings together three approaches to constructing the virtual fundamental cycle for the moduli space of pseudo holomorphic curves All approaches are based on the idea of local Kuranishi charts for the moduli space Workers in the field will get a comprehensive understanding of the details of these constructions and the assumptions under which they can be made These techniques and results will be essential in further applications of this approach to producing invariants of symplectic manifolds

[TORUS 2 - Toward an Open Resource Using Services](#) Dominique Laffly, 2020-04-09. This book, presented in three volumes, examines environmental disciplines in relation to major players in contemporary science: Big Data, artificial intelligence, and cloud computing. Today, there is a real sense of urgency regarding the evolution of computer technology, the ever-increasing volume of data, threats to our climate, and the sustainable development of our planet. As such, we need to reduce technology just as much as we need to bridge the global socio-economic gap between the North and South, between universal free access to data, open data, and free software/open source. In this book, we pay particular attention to certain environmental subjects in order to enrich our understanding of cloud computing. These subjects are erosion, urban air pollution, and atmospheric pollution in Southeast Asia, melting permafrost causing the accelerated release of soil organic carbon in the atmosphere, alert systems of environmental hazards such as forest fires, prospective modeling of socio-spatial practices and land use, and web fountains of geographical data. Finally, this book asks the question in order to find a pattern in the data: how do we move from a traditional computing model-based world to pure mathematical research? After thorough examination of this topic, we conclude that this goal is both transdisciplinary and achievable.

**Noncooperative Approaches to the Theory of Perfect Competition** Andreu Mas-Colell, 2014-05-10. *Economic Theory, Econometrics, and Mathematical Economics: A Series of Monographs and Textbooks*. *Noncooperative Approaches to the Theory of Perfect Competition* focuses on the application of noncooperative approaches to the theory of perfect competition, including Cournot game, no-surplus condition, and Nash equilibria. The selection first elaborates on collusive behavior in noncooperative epsilon equilibria of oligopolies with long but finite lives and noncooperative price taking in large dynamic markets. Discussions focus on noncooperative equilibria which support the monopoly allocation, alternative definition of perfect epsilon equilibrium, one-period Cournot game, fixed demand case, and replication case. The book takes a look at noncooperative price taking in large dynamic markets, no-surplus condition as a characterization of

perfectly competitive equilibrium perfect competition profit criterion and the organization of economic activity Topics include profits to individually improving welfare structure of firms competitive allocations as no surplus allocations profits as rents Walrasian and perfectly competitive equilibrium and no surplus and core equivalence as alternative characterizations of perfectly competitive equilibrium The manuscript ponders on Nash equilibria of market games and efficiency properties of strategic market games as well as commodities agents assignments strategic markets games proper and full Cournot Nash equilibria and finiteness and inefficiency The selection is a valuable source of data for researchers interested in
