- (iii) An \_\_\_\_\_ is a diagrammatic way of representing the relationship between the entities in database.
- (iv) Each entity in a database must have a unique key field known as the \_\_\_\_\_.

(iv) primary key

**Q.2: Explain the problems organizations faced in traditional file approach method in processing information.**

**Answer:**

Most organizations began information processing on a small scale, buying and computer for perhaps one or two individual applications and then computerizing other departments one by one. Applications were developed independently and files of information relevant to one particular department were created and processed by dozens or even hundreds of separate programs. This situation led to following problems.

**(1) DATA REDUNDANCY**

The same data was duplicated in many different files. For example, details of a salesperson's name, address and pay rate might be held on a payroll file for calculating the payroll. The same data may be held on a file in the Personnel Department along with lot of other personal data and in the Sales Department which has a program to keep track of each salesman's record and performance.

**(2) DATA INCONSISTENCY**

When the same items of data are held in several different files, the data has to be updated in each separate file when it changes. The Payroll Department, for example, may change the commission rated paid to sales staff but the Sales Department file may fail to update its files and so be producing reports calculated with out-of-date figures.

**FileMaker Pro 8** Gregory Lawrence Bowden, 2006-07 **Master Data Management**, 2017-06-30 In 1941 a new term was added to the Oxford English Dictionary: Information Explosion. Press 2013. The term explains the growth in information content seen seven decades ago beginning with Fremont Rider, a university librarian who in 1944 estimated that information in university libraries would double in size every sixteen years. Nearly seventy years later Bounie and Gilled produced a report called *International Production and Dissemination of Information* and concluded that the world in 2008 produced 14.7 exabytes of new information, three times the amount of information produced just five years earlier. Press 2013. This rapid growth in information content has generated a greater need for organizations to evaluate how key organizational content is managed to achieve strategic goals and to remain competitive in today's business environment. Pratt, 2005 The essential SQL reference; this text builds on the success of previous editions by presenting SQL commands in a business context. The Oxford Guide to Library Research Thomas Mann, 2015-02-27 The information world has

undergone drastic changes since the publication of the 3rd edition of The Oxford Guide to Library Research in 2005 and Thomas Mann a veteran reference librarian at the Library of Congress has extensively revised his text to reflect those changes This book will answer two basic questions First what is the extent of the significant research resources you will miss if you confine your research entirely or even primarily to sources available on the open Internet Second if you are trying to get a reasonably good overview of the literature on a particular topic rather than just something quickly on it what are the several alternative methods of subject searching which are not available on the Web that are usually much more efficient for that purpose than typing keywords into a blank search box with the results displayed by relevance ranking computer algorithms This book shows researchers how to do comprehensive research on any topic It explains the variety of search mechanisms available so that the researcher can have the reasonable confidence that s he has not overlooked something important This includes not just lists of resources but discussions of the ways to search within them how to find the best search terms how to combine the terms and how to make the databases and other sources show relevant material even when you don t know how to specify the best search terms in advance The book s overall structuring by nine methods of searching that are applicable in any subject area rather than by subjects or by types of literature is unique among guides to research Also unique is the range and variety of concrete examples of what to do and of what not to do The book is not about the Internet it is about the best alternatives to the Internet the sources that are not on the open Web to begin with that can be found only through research libraries and that are more than ever necessary for any kind of substantive scholarly research More than any other research guide available this book directly addresses and provides solutions to the serious problems outlined in recent studies documenting the profound lack of research skills possessed by today s digital natives
