Gas-Phase Reactions V.N. Kondratiev, E.E. Nikitin, 2012-12-06 The present monograph appears after the death of Professor V N Kondratiev one of those scientists who have greatly contributed to the foundation of contemporary gas kinetics The most fundamental idea of chemical kinetics put forward at the beginning of the twentieth century and connected with names such as W Nernst M Bodenstein N N Semenov and C N Hinshelwood was that the complex chemical reactions are in fact a manifestation of a set of simpler elementary reactions involving but a small number of species V N Kondratiev was one of the first to adopt this idea and to start investigations on the elementary chemical reactions proper These investigations revealed explicitly that every elementary reaction in turn consisted of many elementary events usually referred to as elementary processes It took some time to realize that an elementary reaction represented in a very simple way by a macroscopic kinetic equation can be described on a microscopic level by a generalized Boltzmann equation Nevertheless up to the middle of the twentieth century gas kinetics was mainly concerned with the interpretation of complex chemical reactions via a set of elementary reactions But later on the situation changed drastically First the conditions for reducing microscopic equations to macroscopic ones were clearly set up These are essentially based on the fact that the small perturbations of the Maxwell Boltzmann distribution are caused by the reaction proper

Synthesis Green Metrics John Andraos, 2018-12-07 Green chemistry promotes improved syntheses as an intellectual endeavour that can have a great impact both on preserving and utilizing our planet's finite resources and the quality of human life This masterful accomplishment provides an evaluation of environmental impact metrics according to life cycle assessment analysis based on the Mackay compartment environmental model and Guine environmental impact

potentials formalism Assumptions limitations and dealing with missing data are addressed Best literature resources for finding key toxicological parameters are provided and applied to individual reactions as well as entire synthesis plans in order to target molecules of interest Key Features Provides an evaluation of environmental impact metrics according to life cycle assessment analysis Summarises safety hazard metrics according to the same model as life cycle assessment including occupational exposure limits risk phrases flammability and other physical parameters The book will be useful in a range of chemistry courses from undergraduate to advanced graduate courses whether based in lectures tutorials or laboratory experiments

Trends in Molecular Electrochemistry Armando J.L. Pombeiro, Christian Amatore, 2004-09-13 Chemists increasingly apply electrochemical methods to the investigation of their systems in particular towards a better understanding of molecular properties the exploration of chemical reactions involving electron transfer ET the initiation of further reactions by ET the kinetic measurements and the establishment of the reaction mechanisms Prebiotic Chemistry Peter Walde, 2005-10-13
