**Cross-Modal Learning: Adaptivity, Prediction and Interaction** Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is

quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience

Versatile Video Coding Humberto Ochoa Dominguez,K.R. Rao,2022-09-01

Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for storage or transmission of digital video over today's band limited networks The majority of this video is coded using international standards developed in collaboration with ITU T Study Group and MPEG The MPEG family of video coding standards begun on the early 1990s with MPEG 1 developed for video and audio storage on CD ROMs with support for progressive video MPEG 2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video MPEG 4 part 2 also known as MPEG 2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground Since MPEG 1 the main video coding standards were based on the so called macroblocks However research groups continued the work beyond the traditional video coding architectures and found that macroblocks could limit the performance of the compression when using high resolution video Therefore in 2013 the high efficiency video coding HEVC also known as H 265 was released with a structure similar to H 264 AVC but using coding units with more flexible partitions than the traditional macroblocks HEVC has greater flexibility in prediction modes and transform block sizes also it has a more sophisticated interpolation and de blocking filters In 2006 the VC 1 was released VC 1 is a video codec implemented by Microsoft and the Microsoft Windows Media Video VMW 9 and standardized by the Society of Motion Picture and Television Engineers SMPTE In 2017 the Joint Video Experts Team JVET released a call for proposals for a new video coding standard initially called Beyond the HEVC Future Video Coding FVC or known as Versatile Video Coding VVC VVC is being built on top of HEVC for application on Standard Dynamic Range SDR High Dynamic Range HDR and 360 Video The VVC is planned to be finalized by 2020 This book presents the new VVC and updates on the HEVC The book discusses the advances in lossless coding and covers the topic of screen content coding Technical topics discussed include Beyond the High Efficiency Video Coding High Efficiency Video Coding encoder Screen content Lossless and visually lossless coding algorithms Fast coding algorithms Visual quality assessment Other screen content coding algorithms Overview of JPEG Series
