Rajamani, 2012-12-06 Batch manufacturing is a dominant manufacturing activity in the world generating a great deal of industrial output In the coming years we are going to witness an era of mass customization of products The major problems in batch manufacturing are a high level of product variety and small manufacturing lot sizes The product variations present design engineers with the problem of designing many different parts The decisions made in the design stage significantly affect manufacturing cost quality and delivery lead times The impacts of these product variations in manufacturing are high investment in equipment high tooling costs complex scheduling and loading lengthy setup time and costs excessive scrap and high quality control costs However to compete in a global market it is essential to improve the productivity in small batch manufacturing industries For this purpose some innovative methods are needed to reduce product cost lead time and enhance product quality to help increase market share and profitability What is also needed is a higher level of integration of the design and manufacturing activities in a company Group technology provides such a link between design and manufacturing The adoption of group technology concepts which allow for small batch production to gain economic advantages similar to mass production while retaining the flexibility of job shop methods will help address some of the problems     Consultants & Consulting Organizations Directory: Descriptive listings and indexes , 2009     DE Technology , 1987     *Books In Print 2004-2005* Ed Bowker Staff, Staff Bowker, Ed, 2004     Computerworld , For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers
