Pixl Biology Year Exam November 2014

Arturo Cuomo

Pixl Biology Year Exam November 2014:

The Biology of African Savannahs Bryan Shorrocks, William Bates, 2014-11-27 Savannah habitats comprise an ecologically important but ultimately fragile ecosystem. They constitute one of the largest biomes on Earth covering almost 20% of the land surface and can be simply described as tropical and subtropical grasslands with scattered bushes and trees. Most savannahs occur in Africa although smaller areas can be found in South America, India and Australia. They form a rich mosaic of diverse ecosystems and this book offers a concise but comprehensive introduction to their ecology, biodiversity and conservation. The Biology of African Savannahs describes the major plants, grasses and trees such as Acacia and animals, mainly large mammals that live in this habitat and examines the biological and ecological factors that influence their population size, interactions such as predation and community composition. Conservation issues such as climate change, hunting and conflict between wildlife and domestic animals are also discussed. This new edition has been updated throughout with the latest research in the field and contains new technique boxes which introduce readers to some of the analytical methods used to study African savannahs. This accessible text is suitable for both senior undergraduate and graduate students taking courses in savannah and tropical ecology as part of a wider ecology and/or conservation biology degree programme. It will also be of relevance and use to the many professional ecologists and conservation practitioners requiring a concise but authoritative overview of the topic.

The isotypes of α , β and γ tubulin: From evolutionary origins to roles in metazoan development and ligand binding differences Jeffrey Moore, Richard Luduena, Jack Adam Tuszynski, 2023-04-25
