Mars - A Warmer, Wetter Planet Jeffrey S. Kargel, 2004-07-23 Mars is the Solar System's other wild wet water world Long believed to have become cold dead and dry aeons ago we now having striking new proof not only that Mars was a relatively

warm and wet place in geologically recent times but that even today there are vast reserves of water frozen beneath the planet's surface. This compelling new evidence may well boost the chances of a manned mission to Mars sooner rather than later. The discovery is also forcing a complete rethink about the mechanisms of global planetary change. What does the drastic turn of events on Mars mean for Earth's climate system? Could life have thrived on Mars very recently and might it survive today in short-term hibernation? Will humans soon be capable of living off the natural resources that Martian hydrogeology has naturally offered us? Will humans one day be capable of setting off the same chain of events that nature has repeatedly triggered to set off warm wet episodes on Mars? How could Mars be terraformed into a New World? And should we even contemplate doing so? This book offers a visually beautiful, scientifically detailed and accurate presentation of the evidence that has forced this new revolution in Mars science. From the reviews: Long believed to have been cold, dead and dry for eons, there is now striking new proof that not only was Mars a relatively warm and wet place in geologically recent times but that even today there are vast reserves of water frozen beneath the planet's surface. In this absorbing, beautifully illustrated book, Kargel describes the still-unfolding revolution in our knowledge about the Red Planet and how future concepts of Mars will continue to be molded by new revelations of four billion years of geology.

LUNAR AND PLANETARY INFORMATION BULLETIN From the reviews: This exhaustive, effusive and enthusiastic book conveys the excitement of frontline scientific research about as well as can be done. Kargel describes himself as a member of the Tucson Mafia, a group of scientists in full rebellion against the Mars Establishment and its belief in a cold, dry Mars. His ideas are presented in meticulous detail, supported by hundreds of superb pictures, many taken by the author himself. Some perhaps most of his ideas are controversial and may ultimately prove to be wrong, as he himself often points out, but we have to applaud the sometimes career-risking courage with which he has pursued them. In spite of the large amount of rather technical information, the reader is swept along by the author's enthusiasm in conveying it and ability to integrate it into a coherent vision. The reader also learns about the process of science, the thrill of having a new idea and discussing it with others at conferences and cafes, and the drudgery often involved in pursuing the idea, the perils of the formal review process for publications and grant applications, and the roles played by personality conflicts and power politics. **Summing Up: Enthusiastically recommended.** All levels. T. Barker. **CHOICE**, March 2005.

Biodiversity, Biosystematics, and Ecology of Canadian Coleoptera II Christopher G. Majka, J. Klimaszewski, 2009-09-28

This volume includes thirteen research articles focused primarily on Canadian Coleoptera. Several taxonomic and biodiversity studies examine groups within the Staphylinidae, Cerambycidae, Gyrinidae, and Haliplidae, describing new species, presenting keys to identification, mapping distributions, and reporting new provincial and national records. Other studies direct their attention to saproxylic beetles as indicators of forest disturbance and to the beetle fauna of Rhode Island and the larger zoogeographic utility of distributional checklists. An introductory essay discusses a variety of challenges to biodiversity and biosystematics research worldwide. The contents of the present volume represent stepping stones of biodiversity research, a discipline vital to the future of life on the planet. The book is addressed to coleopterists, taxonomists, ecologists, biogeographers, and conservationists.
