Nuclear Planetary Science: Planetary Science Based On Gamma-ray, Neutron And X-ray Spectroscopy Nobuyuki Hasebe, Kyeong Ja Kim, Eido Shibamura, Kunitomo Sakurai, 2017-09-25 Nuclear planetary science has come to play an important role in our understanding of the origin and evolution of the planetary bodies in our solar system A newly established branch of planetary science its study aids in

humankind's exploration of the present states of the structures of various planetary bodies including the Earth their atmospheres and their satellites as well as small celestial bodies e.g. asteroids through direct observation. Knowing the elemental composition of the planetary bodies is essential in order to understand the formation and evolution of planetary bodies just as important as it is to know the mass, radius, density and orbit of the celestial body. Suitable for students and specialists interested in the much wider field of Earth and Planetary Science topics related to the planets and asteroids in the solar system are dealt with in this book. Techniques related to nuclear planetary science's nuclear cosmochemical and geological methods are also covered in this book.

New View of the Moon 2 Clive R. Neal, Lisa R. Gaddis, Bradley L. Jolliff, Samuel J. Lawrence, Stephen J. Mackwell, Charles K. Shearer, Sarah N. Valencia, 2024-05-06. Much has happened in the world in the 17 years since the first *New Views of the Moon* was published as volume 60 of the *Mineralogical Society of America* in 2006. An exciting new era of lunar exploration has begun including the promise of resuming human lunar exploration exploring the lunar Poles and missions to many other high priority science targets. It is fitting therefore to now summarize the current state of knowledge to the degree possible at a time when advancements in knowledge of the Moon are proceeding at a breakneck pace. Therefore during this period of unprecedented lunar exploration activity and as we continue to rebound from a global pandemic we now happily announce this *New Views of the Moon 2* volume summarizing the advances in lunar science and exploration since 2006. The Steering Committee is eternally grateful to all contributors and especially the chapter leads and to Professor Makiko Ohtake University of Aizu Japan and Dr David Blewett Johns Hopkins University Applied Physics Laboratory U.S.A. for organizing the *New Views of the Moon 2* Electronic Annex. We deeply appreciate the hard work and dedication of everyone involved in the production of this volume especially Rachel Russell and Ian Swainson at the *Mineralogical Society of America*. This volume helps to frame our knowledge and expectations for an exciting future of lunar science and exploration and the new discoveries to be made. Having humans return to the Moon now seems more likely than it ever has since the last humans left the Moon on 14 December 1972.

parts The first part introduces the basic principles of ocean modeling and depicts the long way from the generic principles to the practical modeling of oil spills and of the propagation of other adverse impacts The second part focuses on the techniques for solving the inverse problem of the quantification of offshore areas with respect to their potential to serve as a source of environmental danger to vulnerable regions such as spawning nursing or also tourist areas The chapters are written in a tutorial style they are mostly self contained and understandable for non specialist researchers and students They are carefully peer reviewed by international experts The goal was to produce a book that highlights all key steps methods models and data sets it is necessary to combine in order to produce a practically usable technology and or decision support system for a particular sea region Thus the book is useful not only as a description and a manual of this particular technology but also as a roadmap highlighting the complicated technical issues of ocean modeling for practical purposes It describes the approaches taken by the authors in an understandable way and thus is useful for educational purposes such as a course in industrially and environmentally relevant applications of ocean modeling **Children's Magazine Guide** ,2007
