answer A person might assign almost any weight and be perfectly certain that nobody would run after a scale in order to examine whether or not an ounce were wanting Yet this question is by no means a joke and the answer to it is by no means a guess on the contrary both are real scientific results The question in itself is as important a one as the answer which we are able to give is a correct one Knowing the size of our globe one would think that there was no difficulty in determining its weight To do this it would be necessary only to make a little ball of earth that can be accurately weighed then we could easily calculate how many times the earth is larger than this little ball and by so doing we might tell at one s finger ends that if we suppose the little earth ball to weigh a hundred weight the whole globe being so many times larger must weigh so many hundred weights
