Natural Law Liberalism and the Malaise of Modernity Stephen Boulter, 2024-07-22 This book examines modernity itself A single overarching policy recommendation is defended namely that the West ought not to defect from modernity's core commitments to the sciences market economics and liberal democracy despite the litany of complaints that have been and continue to be levelled against it But in addition to this overarching recommendation numerous policy suggestions are made The reader will find discussions as wide ranging as electoral regimes and judicial procedure banking regulations and the ethics of a modern civil service What binds these disparate subsidiary recommendations together is that they are designed to meet the challenges facing modernity while remaining true to its core commitments These subsidiary policy recommendations in turn are not developed in an ad hoc manner but are themselves motivated by a distinct philosophy of modernity which is termed natural law liberalism

Really Good Schools James Tooley, 2021-04-12 Almost overnight a virus has brought into question America's nearly 200 year old government run K 12 school system and prompted an urgent search for alternatives But where should we turn to find them Enter James Tooley's Really Good Schools A distinguished scholar of education and the world's foremost expert on private low cost innovative education Tooley takes readers to some of the world's most impoverished communities located in some of the world's most dangerous places including India and such war torn countries as Sierra Leone Liberia and South Sudan There in places where education experts fear to tread Tooley finds thriving private schools that government multinational NGOs and even international charity officials deny exist Why Because the very existence of low cost high quality private schools shatters the prevailing myth in the U S U K and western Europe that absent government affordable high quality schools for the poor could not exist But they do And they are ubiquitous and in high demand Founded by unheralded local educational entrepreneurs these schools are proving that self organized education is not just possible but flourishing often enrolling far more students

than free government schools do at prices within reach of even the most impoverished families In the course of his analysis Tooley asks the key questions What proportion of poor children is served How good are the private schools What are the business models for these schools And can they be replicated and improved The evidence is in In poor urban and rural areas around the world children in low cost private schools outperform those in government schools And the schools do so for a fraction of the per pupil cost Ubiquity affordability quality value for money equity choice and sustainability these are the seven categories by which schooling should be judged according to Tooley In every instance one is forced to conclude that low cost non governmental entrepreneurial education as practiced by the poor around the globe contains the key to their rise to prosperity and leadership positions within their own respective cultures Alarmed by recent government barriers in education Americans can now find hope in the triumph in the face of acute adversity of these remarkable schools Because of the pandemic parents in America and Europe are discovering that the education of their children is indeed possible and likely far better without government meddling with rigid seat time mandates outdated school calendars absurd age driven grade levels and worse testing regimes And having experienced the first fruits of educational freedom parents will be increasingly open to the possibilities of ever greater educational entrepreneurship and innovation Thankfully they have Really Good Schools to show the way *Microeconomics* Robert E. Kuenne,1991 **Ethics and Future Generations** Rahul Kumar,2018-10-18 Existing human beings stand in a unique relationship of asymmetrical influence over future generations Our choices now can settle whether there are any human beings in the further future how many will exist what capacities and abilities they might have and what the character of the natural world they inhabit is like This volume with contributions from both new voices and prominent established figures in moral and political philosophy examines three generally underexplored themes concerning morality and our relationship to future generations First would it be morally wrong to allow humanity to go extinct Or do we have moral reasons to try and ensure that humanity continues into the indefinite future Second if humanity is to continue into the future how many people should there be And is it morally important whether they have lives that are of high quality or are just barely worth living And third how can we best make sense of the intuitive idea that by not taking action on climate change and preserving natural resources we are in some way wronging future generations This book was originally published as a special issue of the Canadian Journal of Philosophy **Saturday Review of Literature** ,1928 *The Review* ,1919 **Review** Fabian Franklin,Harold de Wolf Fuller,1920
