### Polymerase Chain Reaction

#### Synopsis

In the Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to those that make plants, be multiplied exponentially, and you will find out the exact number of copies of the target DNA sequence in the test that the simulation will give to you.

#### Design and

After sampling, you will go to the PCR simulation interface. The sample of DNA you collected by using a microchip is thermocycled, and this amplification from the initial sample is repeated for 30 cycles that double the number exponentially the PCR amplification.

#### See the structure of DNA and the amplification of DNA

In the simulation, you will see the PCR amplification on the computer, which illustrates the structure of DNA and the amplification that includes all the steps of the PCR process. The experimental process, as well as all the details of the PCR test.

#### Identify the number

In the PCR simulation, you will collect your sample and other samples collected from the computer, and you will find out the number of the PCR amplification.

#### Learning Objectives

In the PCR simulation, you will see the results:

1. Identify the function of PCR amplification, PCR amplification and PCR amplification.
2. Identify the PCR amplification using PCR amplification and PCR amplification.
