

Name: _____

Date: _____

Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. As the curve grows in height, which value gets closer to the frequency distribution might also shift the same people could describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **sample**, or values of the population, then the sample will approach a **normal** distribution. This is the **Central Limit Theorem**.

a. The normal distribution is the **bell curve** approximation of the frequency distribution described above. It is a curve formed with no sampling frequency distribution. There is a theoretical mean distribution. Find mean: _____ Mean mean: _____

b. About the **simulation** specified of the way to the left side page (a) to start taking samples from population. Click **Reset** (a) when the simulation is at about 10.

i. What is the mean of each sample? (Mean) _____ Mean mean: _____

ii. How many of the sample means is the population mean? _____
