1. A class extension of the lab activity *Making Connections*, a biology teacher asked students to transform variable x other than exercise that would affect heart rate. The students hypothesized that eating a lunch high in protein would decrease heart rates. The heart rates of 15 students were lower while the heart rate of 5 students were higher after lunch.

The best explanation for the observation that the height rates of 5 students were higher after lunch is

B) the students all participated in physical education class immediately before lunch.

C) the students all had varying physical fitness levels and consumed different amounts of protein.

C) hypothesis.

D) control.
- A student is opening and closing clothespins as part of a lab activity. The student begins to experience muscle fatigue, and the rate at which the student is opening and closing the clothespins slows. Which graph best represents the relationship between a time and number of clothespin squeezes?
