Eruption of Soufriere Hills Volcano, Montserrat from 2000 to 2010 G. Wadge, R.E.A. Robertson, B. Voight, 2014-09-04 The 1995 to present eruption of Soufriere Hills Volcano on Montserrat is one of the most important and best studied eruptions of an explosive andesitic volcano. This volume presents scientific findings from the period between 2000 and 2010; it follows on from Memoir 21 which focused on the early years of activity between 1995 and 1999. In addition to descriptions and analysis of the growth, collapse, and explosions associated with lava domes, there are papers on the deformation of the volcano caused by the deep magma, the petrology and geochemistry of the lavas and associated gases. Of particular note are an overview of the insights into the deep structure of the volcano that resulted from a major international seismic tomography experiment and an analysis of the quantitative risk assessment process that has run now for most of the eruption, the longest such continuous assessment in the world.
