Harnett,Laureen P. Cantwell-Jurkovic,2022-02-19 Service on Institutional Review Boards IRB and Institutional Animal Care and Use Committees IACUC is an uncommon activity for librarians Even librarians who participate in institutional research activities in a supportive capacity or conduct their own original research as scholars themselves and are familiar with the IRB IACUC research approval process they may hesitate to participate more fully with these boards There may be a perception that the work of the IRB and IACUC is too scientifically complex for librarians without an appropriate background Library administrators may not advocate for librarian inclusion on the board for fear of additional burdens on the librarian s time and

university administrators might need some convincing of the librarian's suitability to perform this work. This book provides librarians with foundational knowledge of the IRB and IACUC, describes the work of these important committees, and expands librarians' conceptualization and knowledge of opportunities to create services and partnerships through participation. The book provides a progressively more comprehensive understanding of the work of these committees. Parts I and II discuss IRB and IACUC respectively, their history, functions, and membership. Part III highlights expanding roles for librarians on IRB and IACUC and in institutional research activities. A special feature of this section describes the experiences of librarians in their own words who work with IRB or IACUC, what they have learned, how they have used their experiences to create partnerships and market library services, and what role they see for libraries and librarians in institutional research. **Computerworld**

To survive, plants have evolved complex physiological and biochemical adaptations to cope with a variety of adverse environmental stresses. Among them, reactive oxygen species (ROS) are key regulators and play pivotal roles during plant stress responses, which are thought to function as early signals during plant abiotic stress responses. ROS were long regarded as unwanted and toxic by-products of physiological metabolism. However, ROS are now recognized as central players in the complex signaling network of cells. Therefore, a fine-tuning control between ROS production and scavenging pathways is essential to maintain non-toxic levels in plants under stressful conditions through enzymatic and non-enzymatic antioxidant defense systems. We focus on the roles of ROS during plant abiotic stress responses in this Research Topic. Plant responses to multiple abiotic stresses and effects of hormones and chemicals on plant stress responses have been carefully studied. Although functions of several stress-responsive genes have been characterized and possible interactions between hormones and ROS are discussed, future researches are needed to functionally characterize ROS regulatory and signaling transduction pathways. **Biochar for Environmental Remediation** Willis
