

ELECTRICAL CURRENT

When electrical charges move, they are known as electric **current**.

Electrical current is the flow of _____ through a substance

Usually is the flow of electrons through _____

CIRCUITS: In order for the current to flow, it requires an _____ electric circuit

1. Label the different components:

2. Match these words with the correct definition:

POWER SOURCE

CIRCUIT

WIRES

CURRENT

SWITCH

ELECTRICAL DEVICE/LOAD

the flow of electricity

they conduct electricity

it supplies the electrical current

converts electricity into another type of energy

a closed path of electricity

it opens or closes the circuit

3. Answer:

In radio, electrical energy is transformed into ... energy.

- ☐ mechanical
- ☐ sound
- ☐ light
- ☐ heat

In a simple circuit, why does a light bulb go out when you close the switch?

- ☐ Because the switch produces electricity.
- ☐ Because too much electricity flows through the bulb.
- ☐ Because the electricity doesn't flow when you close the switch.
- ☐ Because opening the switch breaks the circuit.

4. Complete the missing words:

It is responsible for supplying the electrical currentSOURCE

It opens or closes a circuit.

It conducts electricity. It is made out of copper.

It converts electricity into another type of energy. DEVICE

... is an example of an electrical conductor material.

- ☐ Metal
- ☐ Plastic
- ☐ Wood
- ☐ Glass

Why is electrical wiring usually covered with a layer of plastic?

- ☐ it helps electricity to flow along the wire.
- ☐ It is an electrical conductor.
- ☐ It is not shiny or magnetic.

SCIENCE PROJECTS IN RENEWABLE ENERGY AND ENERGY EFFICIENCY

, The Value of Science Projects Science projects are an especially effective way of teaching students about the world around them Whether conducted in the classroom or for a science fair science projects can help develop critical thinking and problem solving skills In a classroom setting science projects offer a way for teachers to put action into the lessons The students have fun while they re learning important knowledge and skills And the teacher often learns with the students experiencing excitement with each new discovery Science projects are generally of two types non experimental and experimental Non experimental projects usually reflect what the student has read or heard about in an area of science By creating displays or collections of scientific information or demonstrating certain natural phenomena the student goes through a process similar to a library research report or a meta analysis in any other subject Projects of this type may be appropriate for some students at a very early level but they usually do not provide the experiences that develop problem solving skills related to the scientific process On the other hand experimental projects pose a question or hypothesis which is then answered by doing an experiment or by modeling a phenomenon The question doesn t have to be something never before answered by scientist that is not necessary to conduct original research The process of picking a topic designing an experiment and recording and analyzing data is what s important
