

Bending Light (Part I) - Reflection and Refraction

Log on to the following website:

<http://phet.colorado.edu/en/simulation/bending-light>

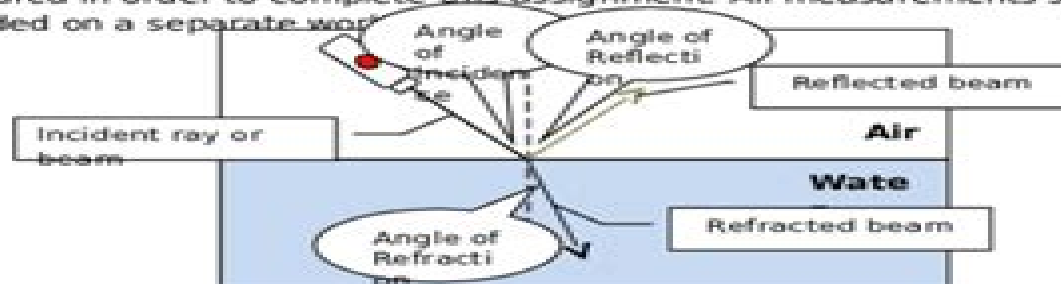

Select - Bending Light* and click on **Run Now!** (Link is provided above). Use the default settings (Intro) for part -I and follow the steps below to complete the lab assignment.

* The virtual lab home screen looks somewhat like this - A window with some icons, a toolbox for measurements, and a horizontally split screen to select different medium. Feel free to check it out before you begin the actual lab. Note: You may reset the lab at any time to start over again.

Follow directions below to complete lab assignment (Time Allotted = 40 min):

1. Use the default menu 'Intro,' and select 'Show Normal' if the vertical dotted line doesn't appear on the default screen. Next, left click and drag the protractor and set it at the intersection of the normal. Make sure the zero's line up with the normal and 90's with the horizontal split screen.
2. Click on the red button to turn the Laser beam ON. You may also check out the Laser Wave View as shown in the screen snapshot above, but retain the Laser Ray View to complete this lab.
3. Left click and slide-rotate the Laser pointer to change the direction of the Laser beam. Set the Laser beam to different angles of incidence and measure the angles of reflection and refraction.
4. Also, use the intensity tool from the toolbox to measure the intensity of the incident, reflected, and refracted beams for each angle of incidence tested. The beam has to pass through the magnifying glass to measure the intensity of the Laser beam.
5. Figure below shows the basic parts of the Laser beam and the angles to be measured in order to complete this assignment. All measurements should be recorded on a separate work
