The BBC National Short Story Award 2014 Zadie Smith, Lionel Shriver, Rose Tremain, Tessa Hadley, Francesca Rhydderich, 2014-09-17 Short story writers often say that for maximum dramatic effect you should arrive fashionably late to a scene. After years of living in the literary wilderness it seems the short story's own moment has finally arrived. The last twelve months have marked an extraordinary year for the form. The Nobel Prize for Literature, the Man Booker International Prize, the Folio Prize and the Independent Foreign Fiction Prize were all awarded to short story writers. The shortlist for the BBC National Short Story Award 2014 captures the spirit of this mood and the short story's knack for cutting straight to the action, the all-important moment of change. The five stories on this year's shortlist were chosen by a panel of judges that included poet and novelist Adam Foulds, author, illustrator and performer Laura Dockrill, editor Philip Gwyn Jones, BBC Editor of Books Di Speirs and the broadcaster Alan Yentob, who chaired the panel and introduces this collection. Problem-solving Strategies In Mathematics: From Common Approaches To Exemplary Strategies Alfred S Posamentier, Stephen Krulik, 2015-03-05 This book introduces ten problem solving strategies by first presenting the strategy and then applying it to problems in elementary mathematics. In doing so, first the common approach is shown and then a more elegant strategy is provided. Elementary mathematics is used so that the reader can focus on the strategy and not be distracted by some more sophisticated mathematics. *The Mathematics Coach Handbook* Alfred S Posamentier, Stephen Krulik, 2018-11-07 Many schools throughout the United States are now employing coaches to support teachers in the teaching of mathematics. Very often these are professionals selected from the current teaching ranks who did not receive any special training to serve as a coach. This book provides the skills, knowledge and lessons from experience that lead such a mentor to function effectively. Aside from describing the basic duties of an effective math coach, we also provide a plethora of resources to enrich instruction, improve problem solving direction and provide teachers with a wide variety of techniques to enhance their teaching effectiveness. A Pedagogical Design for Human Flourishing Cynthia McCallister, 2022-03-28 In *A Pedagogical Design for Human Flourishing: Transforming Schools with the McCallister Model*, Cynthia McCallister presents a revolutionary paradigm for education that is practical, conceptually convincing and grounded in contemporary behavioral science theory. Beginning with the assertion that equality of educational opportunity depends on access to experiences that are sufficiently appropriate and rich to enable the achievement of diverse human potentials, she provides a comprehensive school design for intervention that demonstrates how to achieve it. Grounded in recent advances in learning science, McCallister asserts three necessary conditions for learning: the need for learners to have access to diverse, rich environmental experiences; the need for them to enjoy fundamental freedom and autonomy to direct their own learning; and access to full and free forms of association. In her model, these conditions provide what is necessary for learners to coordinate their minds with others to develop their identities, personalities and talents. These conditions are animated in concrete procedures that

can be adapted to a wide variety of populations in formal informal and remote educational settings The procedures take the form of rules that learners comply with in the exercise of their freedom When they are followed the rules provide a grammar for the social norms that govern the moral worlds of learners and compel them to flourish Tested over two decades in her work as a teacher scholar and school reformer in more than 20 NYC public schools the McCallister Method has delivered an innovative and disruptive approach to schooling that has proven successful in finally transforming low performing industrial schools into 21st century learning organizations Online support material includes assessments records surveys and more to be used in school design and classroom settings

Piaget's Genetic Epistemology for Mathematics Education Research Paul Christian Dawkins, Amy J. Hackenberg, Anderson Norton, 2024-01-02 The book provides an entry point for graduate students and other scholars interested in using the constructs of Piaget's genetic epistemology in mathematics education research Constructs comprising genetic epistemology form the basis for some of the most well developed theoretical frameworks available for characterizing learning particularly in mathematics The depth and complexity of Piaget's work can make it challenging to find adequate entry points for learners not least because it requires a reorientation regarding the nature of mathematical knowledge itself This volume gathers leading scholars to help address that challenge The main section of the book presents key Piagetian constructs for mathematics education research such as schemes and operations figurative and operative thought images and meanings and decentering The chapters that discuss these constructs include examples from research and address how these constructs can be used in research There are two chapters on various types of reflective abstraction because this construct is Piaget's primary tool for characterizing the advancement of knowledge The later sections of the book contain commentaries reflecting on the contributions of the body of theory developed in the first section They connect genetic epistemology to current research domains such as equity and the latest in educational psychology Finally the book closes with short chapters portraying how scholars are using these tools in specific arenas of mathematics education research including in special education early childhood education and statistics education

Mathematical Problem Solving ALAN H. SCHOENFELD, 2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level to people with an interest in higher order thinking skills in any domain and to all mathematics teachers The focal point of the book is a framework for the analysis of complex problem solving behavior That framework is presented in Part One which consists of Chapters 1 through 5 It describes four qualitatively different aspects of complex intellectual activity cognitive resources the body of facts and procedures at one's disposal heuristics rules of thumb for making progress in difficult situations control having to do with the efficiency with

which individuals utilize the knowledge at their disposal and belief systems one's perspectives regarding the nature of a discipline and how one goes about working in it Part Two of the book consisting of Chapters 6 through 10 presents a series of empirical studies that flesh out the analytical framework These studies document the ways that competent problem solvers make the most of the knowledge at their disposal They include observations of students indicating some typical roadblocks to success Data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction Finally observations made in typical high school classrooms serve to indicate some of the sources of students' often counterproductive mathematical behavior *"The" Athenaeum*, 1837

Athenaeum and Literary Chronicle, 1837 Dead Man Talking... and talking... and talking Philip Sorgen, 2014-08-20
PHILIP SORGEN is not really dead it's just that since he received his poetic license he has been dying to use it Philip has been an actuarial trainee at Metropolitan Life Insurance Company a Sp4 in The U S Army reserve and then for thirtyfour rewarding years a mathematics teacher at Great Neck North High School He plays the piano by ear composes music with a pencil and has tennis elbow which is a lot less severe than tennis balls He is the husband of one a father of two and a grandfather of three This is the story of his life *Slow Burn* R. Jisung Park, 2025-07-29 How the subtle but significant consequences of a hotter planet have already begun from lower test scores to higher crime rates and how we might tackle them today It's hard not to feel anxious about the problem of climate change especially if we think of it as an impending planetary catastrophe In *Slow Burn* R Jisung Park encourages us to view climate change through a different lens one that focuses less on the possibility of mass climate extinction in a theoretical future and more on the everyday implications of climate change here and now Drawing on a wealth of new data and cutting edge economics Park shows how climate change headlines often miss some of the most important costs When wildfires blaze what happens to people downwind of the smoke

When natural disasters destroy buildings and bridges what happens to educational outcomes Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations imperceptibly elevated health risks spread across billions of people pennies off the dollar of productivity fewer opportunities for upward mobility By investigating how the physical phenomenon of climate change interacts with social and economic institutions Park illustrates how climate change already affects everyone and may act as an amplifier of inequality Wealthier households and corporations may adapt quickly but without targeted interventions less advantaged communities may not Viewing climate change as a slow and unequal burn comes with an important silver lining It puts dollars and cents behind the case for aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects We can begin to overcome our climate anxiety Park shows us when we begin to tackle these problems locally
