Gravitational Force

Purpose: To determine the nature of gravitational force on matter. To determine the general relationship for calculating effect of gravitation (the force of gravitational field) on matter.

Apparatus: spring scale, masses, ring stand.

Introduction: A spring scale simply measures the amount of **Force** on the scale. This force is measured in the SI unit of newtons (N).

Procedure:

1. Suspend a spring scale from a stand.
2. Hang masses on the scale and record the Force in newtons.

Analysis:

To determine a relationship between variables, graph Force vs. mass.

Determine the mathematical model which describes the relationship. =

variables per axis
high
> 10% greatest y-value

What does the slope of the line mean and is there significance to the y-intercept? (10% rule)

The slope of the line represents the acceleration due to gravity. In addition, there is no significance in the y-intercept because it is less than the highest y-value

Conclusion: In addition to the regular items included in your well written conclusion, make sure you include

- A discussion of the effect of the gravitational field on matter
- Clearly define the difference between "weight", and "mass"
- and define a newton (not of the fig variety).

was interested in classroom inquiry and so we each wanted to situate our analysis in these classrooms For that purpose our discussions are organized into sections Each section begins with one or more vignette snippets of science classrooms that the authors then discuss how this vignette demonstrates some aspect of the specific dimension that they are charged with discussing Because inquiry is so multifaceted and its portrayals are often complex and nuanced the discussion of the dimension is broken into separate essays each of which addresses the focal dimension in different ways Following the essay a broader discussion across the essays is offered to support your sense making As we began this effort we selected what we understood to be the most influential dimensions of inquiry in the classroom But certainly there are others that can and should have been included i e the role of curriculum in supporting or confining the enactment of inquiry the manner in which inquiry can shape students knowledge the role systemic efforts can have in enabling inquiry But given the confines of one text we ve chosen what we understood to be the central components and these have been arranged into 6 sections Our vision is that each of these sections can be self supporting so their appearance in the text doesn t represent the order in which they must be read Ideally the reader would engage in the introduction then select the section that addresses the dimension influencing classroom inquiry that is of greatest importance The only exception to this is section 6 which is a specific form of enactment of classroom inquiry engagement with this section may be best augmented after reading the sections that interest you
