The relationship between perceptual-motor skills and handwriting has been investigated from two different but complementary theoretical frameworks: (1) the developmental perspective with regard to the question of readiness for handwriting (Beery, 1989) or to the identification of difficulties of handwriting and (2) the hierarchical model of motor control wherein visual and kinesthetic feedback information is required to perform handwriting (Maeland, 1992; Smits-Engelsman, Niemeijer, & Van Galen, 2001).

From these two theoretical frameworks, many studies have investigated the relationship between the quality of handwriting and visual-motor integration although no consensus concerning the definition of visual-motor integration exists. Beery (2004) defined it as the coordination between visual perception and movement of fingers, which is measured by a
