

## Unloading the Camera

31

The exposed film must be re-wound back into its original cartridge or film magazine. If desired, a roll of film which has only partially been exposed can also be re-wound and removed. In this case, note the number of exposed frames indicated on the exposure counter, and use the number for guidance when re-using the film.

To re-wind the film, turn the ring on the shutter release button to the "R" position, lift out the rapid re-wind lever from its position on the re-winding knob (Fig. 31) and turn in the direction of the arrow. As the film is being re-wound, resistance will be felt, and the red dot on the shutter release button will revolve. Wind until no further resistance is felt and the dot stops its motion. The film is now completely re-wound, and the camera back may be opened to remove the film from the camera.

## Film Sensitivity

32

The film type indicating dial on the bottom of the camera serves as a reminder as to the type of film with which the camera is loaded. It can be set for either color or black and white film, and also for film speed in A.S.A. film ratings.

Different systems of expressing film speeds are used in different countries. The table below can be used to convert the other popular systems to A.S.A. ratings: —

A.S.A. & B.S.	B.S. Log Index	DIN/10°	Scheiner	General Electric	Weston	H & D
6	19°	10	20°	8	5	125
