James C. Leiterman, 2002-11 Due to the advancement of video games and game console hardware, the super computer is now a home consumer appliance. **Vector Game Math Processors** explains to programmers how to write parallel-based integer and floating-point based math algorithms for use in video games as well as scientific applications. Every manufacturer uses their own terms, such as SIMD, Packed Data, Parallel Data, Semi-Vector, and Vector, but they are all different labels for the methodology for programming multiple sets of data with the same computer instruction at the same time.
