**Fun and Games** Panos Markopoulos, Wijnand IJsselstein, Duncan Rowland, 2008-10-08 The use of computing technology for entertainment purposes is not a recent phenomenon. Video game consoles, home computers, and other entertainment media have been used widely for more than three decades, and people of all ages are spending an increasing amount of time and money on these technologies. More recent is the rise of a vibrant research community focusing on gaming and entertainment applications. Driven by the growth and the coming of age of the gaming industry and by its increasing recognition in the media and the minds of the broader public, the study of computer games, game development, and experiences is attracting the interest of researchers from very diverse fields: social sciences, computing, electrical engineering, design, etc. Research of this kind looks to extend the boundaries of gaming technologies. In a relentless drive for innovation, it looks to create and understand an ever-increasing range of experiences and examine how games can provide value for educational, therapeutic, and other serious purposes. These themes were reflected in the call for participation and eventually the papers accepted for presentation. The Fun and Games conference was the second event of a bi-annual series of conferences. The first event of the series was held in Preston in 2006, organized by the University of Central Lancashire. Following the success of this event, it was decided to run a follow-up.

**Feeling Machines** Shawn Bender,2024-11-19 In recent years debates over healthcare have accompanied rapid advances in technology from the expansion of telehealth services to artificial intelligence driven diagnostics In this book Shawn Bender delves into the world of Japanese robots engineered for care Care robots kaigo robotto emerged early in the 21st century when roboticists began converting assembly line technologies into responsive machines for older adults and people with disabilities These robots are meant to be felt and programmed to feel While some greet them with enthusiasm others fear that they might replace a fundamentally human task Based on fieldwork in Japan Denmark and Germany Bender traces the emergence of care robots in Japan and examines their impact on therapeutic practice around the world Social science scholarship on robotics tends to

be either speculative imagining life together with robots or experimental observing robot human interaction in laboratories or through short term field studies Instead Bender follows roboticists developing technologies in Japan and travels with the robots themselves into everyday sites of care tracking the integration of robots into institutional care and the connection of care practice to robotics development By exploring the application of Japanese robotics across the globe Feeling Machines highlights the entanglements of therapeutic practice and technological innovation in an age of more than human care
