G Psacharopoulos

Trane Xe 12manual:

A Program for Computing Steady Inviscid Three-dimensional Supersonic Flow on Reentry Vehicles J. M.

Solomon, M. Ciment, R. E. Ferguson, J. B. Bell, A. B. Wardlaw (Jr), 1977 A comprehensive computational procedure is presented for predicting the supersonic region of the flow field on advanced reentry vehicle shapes in steady flight at pitch and yaw. The procedure utilizes explicit second order accurate finite difference methods applied to the conservation law form of the steady inviscid flow equations. Improved numerical methods are used at the body surface and the bow shock wave. Provisions for treating body geometries with discontinuous slopes are also included. Either perfect gas or real gas equilibrium thermodynamic properties can be used. The computational procedure is implemented as a Fortran computer code which provides a practicable representation of the inviscid flow field and the resulting aerodynamic force and moment on the vehicle. This volume contains detailed instructions for operating the code and interpreting the output results. Moody's
