

## PHET Magnetism - Lab Guide

### Part 1

Today you will be exploring magnets and electromagnets through a simulation provided by the University of Colorado at Boulder.

1. Click "understanding" under "questions" (see: "Magnetic and Electromagnets." Below this link: [Magnetic and Electromagnets](#).)

2. Move the compass slowly along a circle around the bar magnet until you reach the top of the opposite pole of the bar magnet. Observe what happens to the compass needle.

The compass has the ability to give you information about direction. It is often used to indicate where geographic north is. What is the magnetic pole and how is it related to the north pole? (You will find out as you go through the simulation.)

3. When the bar magnet is flipped, what will happen to the compass needle?

It will be like the magnet is flipped and is repelling.

4. What is the strength of the force between the bar magnet and the compass needle?

It is approximately a perpendicular distance.

5. What are the similarities between the compass needle (magnet) and a bar magnet?

We know that both have magnetic poles and they both have a magnetic field. They both have a magnetic field and they both have a magnetic field.

6. Move the compass along a circular path around the bar magnet until you are back at the opposite pole of the bar magnet. Observe what happens to the compass needle.

When you move the bar magnet, the compass needle will move. It will move from the north pole to the south pole and from the south pole to the north pole. It will move from the north pole to the south pole and from the south pole to the north pole.
