

Figure 8-10

RAISING POSITION—FLUID FLOW

When the position control lever is moved to the raise position, the control valve spool, 1, is moved inward (rearward). The fluid passages in the control valve are opened, and fluid flows to the check valve, 5, through the check valve fluid passage, 4.

Fluid pressure against the check valve overcomes the check valve spring, 6, and the lift cylinder fluid static pressure on the check valve. This raises the check valve off its seat, allowing

fluid to flow to the lift cylinder, 7, to raise the implement. When the fluid pressure exceeds 2135 psi (150 bar), the relief valve, 6, opens and fluid is returned to the sump.

A high pressure safety valve in the lift cylinder head protects against shock loads by opening at pressures exceeding 250 +/- 20 bars (3625 +/- 290 psi), returning fluid to sump.

New Holland Tc 25 Owners Manual
