Matter, Building Block of the Universe ,1993 **Developments in Reinforced Plastics—4 G.** Pritchard,2012-12-06 One of the most interesting developments in composite materials technology during the past decade has been the attempt to displace thermosetting resins from their position as the natural matrix in advanced composites for sUl h fields as aerospace Dr McMahon gives some indication of the nature of this challenge in his chapter on fibre reinforced thermoplastics He acknowledges the problem of their low fibre contents with the associated possibility of inadequate mechanical properties especially in compression and draws attention to the way in which the lack of suitable teSI methods for composites in compression has caused difficulties in assessing the latest thermoplastics composites in this respect It is therefore of special interest that Professor Piggott deals with the whole question of compression tesllflg of composites in Chapter 4 On the positive side reinforced thermoplastics seem to be much more damage tolerant than thermosets This is clearly an advantage that will not be lost on the aircraft industry The subject of damage repair to FRP is one of substantial concern the wider question of defect detection and assessment is discussed authoritatively by Reifsnider and Henneke in Chapter 3 which focuses on the technique of thermography **Official Gazette of the United States Patent and**
