## section 1 Wave Behavior

### ● Before You Read

Have you ever shouted and heard an echo? On the lines below, write about what you think causes an echo.

### ● Read to Learn

#### Reflection

You can see yourself in a mirror because waves of light are reflected. Reflect means to throw back. **Reflection** happens when a wave hits an object or surface and bounces off. Light waves from the Sun or a lightbulb bounce off of your face. The light waves hit the mirror and reflect back to your eyes. So you see your reflection in the mirror.

You can see your reflection in the smooth surface of a pond, too. But, if the water has ripples or waves, it is harder to see your reflection. You cannot see a sharp image when light reflects from an uneven surface like ripples on the water. This is because the reflected light goes in many different directions.

#### Refraction

A wave changes direction when it reflects from a surface. Waves can also change direction in another way. Have you ever tried to grab a sinking object in a swimming pool, but missed it? You were probably sure you grabbed right where it was. But, the light waves from the object changed direction when they moved from the water to the air. The bending of a wave as it moves from one medium to another is **refraction**.

### What You'll Learn

- how waves can reflect
- how waves change direction
- how waves can bend around barriers

### Mark the Text

**Identify Details** Highlight each question head. Then use another color to highlight the answer to each question.

### FOLDABLES

**D Organize Information** Use four quarter-sheets of paper to take notes about reflection, refraction, diffraction, and interference as you read.
