radical ring opening polymerization along with strategies for the synthesis of conducting polymers dendrimers hyperbranched polymers and block copolymers Polymerization mechanisms have been made more explicit by showing electron movements Part II In this part the authors have added new topics on diffusion solution behaviour of polyelectrolytes and field flow fractionation methods They also greatly expand coverage of spectroscopy including UV visible Raman infrared NMR and mass spectroscopy In addition the Flory Huggins theory for polymer solutions and their phase separation is treated more rigorously Part III A completely new major topic in this section is multicomponent polymer systems The book also incorporates new material on macromolecular dynamics and reptation liquid crystalline polymers and thermal analysis Many of the diagrams and micrographs have been updated to more clearly highlight features of polymer morphology Part IV The last part of the book contains major new sections on polymer composites such as nanocomposites and electrical properties of polymers Other new topics include effects of chain entanglements swelling of elastomers polymer fibres impact behaviour and ductile fracture Coverage of rubber toughening of brittle plastics has also been revised and expanded While this edition adds many new concepts the philosophy of the book remains unchanged Largely self contained the text fully derives most equations and cross references topics between chapters where appropriate Each chapter not only includes a list of further reading to help readers expand their knowledge of the subject but also provides problem sets to test understanding particularly of numerical aspects

Polymer Membranes for Fuel Cells Javid Zaidi, Takeshi Matsuura, 2010-07-15 From the late 1960 s perfluorosulfonic acid PFSA ionomers have dominated the PEM fuel cell industry as the membrane material of choice The gold standard amongst the many variations that exist today has been and to a great extent still is DuPont s Nafion family of materials However there is significant concern in the industry that these materials will not meet the cost performance and durability requirements necessary to drive commercialization in key market segments especially automotive Indeed Honda has already put fuel cell vehicles in the hands of real end users that have home grown fuel cell stack technology incorporating hydrocarbon based ionomers Polymer Membranes in Fuel Cells takes an in depth look at the new chem tries and membrane technologies that have been developed over the years to address the concerns associated with the materials currently in use Unlike the PFSA which were originally developed for the chlor alkali industry the more recent hydrocarbon and composite materials have been developed to meet the specific requirements of PEM Fuel Cells Having said this most of the work has been based on derivatives of known polymers such as poly ether ether ketones to ensure that the critical requirement of low cost is met More aggressive operational requirements have also spurred the development on new materials for example the need for operation at higher temperature under low relative humidity has spawned the creation of a plethora of new polymers with potential application in PEM Fuel Cells
