Pedigree Lauren A. Rivera, 2016-03-22 How social class determines who lands the best jobs

Americans are taught to believe that upward mobility is possible for anyone who is willing to work hard regardless of their social status yet it is often those from affluent backgrounds who land the best jobs Pedigree takes readers behind the closed doors of top tier investment banks consulting firms and law firms to reveal the truth about who really gets hired for the nation's highest paying entry level jobs who doesn't and why Drawing on scores of in depth interviews as well as firsthand observation of hiring practices at some of America's most prestigious firms Lauren Rivera shows how at every step of the hiring process the ways that employers define and evaluate merit are strongly skewed to favor job applicants from

economically privileged backgrounds She reveals how decision makers draw from ideas about talent what it is what best signals it and who does and does not have it that are deeply rooted in social class Displaying the right stuff that elite employers are looking for entails considerable amounts of economic social and cultural resources on the part of the applicants and their parents Challenging our most cherished beliefs about college as a great equalizer and the job market as a level playing field Pedigree exposes the class biases built into American notions about the best and the brightest and shows how social status plays a significant role in determining who reaches the top of the economic ladder

Nanochemistry for Chemistry Educators Riam Abu Much, Kurt Winkelmann, Muhamad Hugerat, 2022-06-29 For the first time this book sets out ways to teach the science of nanochemistry at a level suitable for pre service and in service teachers in middle and secondary school The authors draw upon peer reviewed science education literature for experiments activities educational research and methods of teaching the subject The book starts with an overview of chemical nanotechnology including definition of the basic concepts in nanoscience properties types of nanostructured materials synthesis characterization and applications It includes examples of how nanochemistry impacts our daily lives This theoretical background is an address for teachers even if they do not have enough information about the subject of nanoscale science Subsequent chapters present best practices for presenting the material to students in a way that improves their attitudes and knowledge toward nanochemistry and STEM subjects in general The final chapter includes experiments designed for middle and high school students From basic science through to current and near future developments for applications of nanomaterials and nanostructures in medicine electronics energy and the environment users of the book will find a wealth of ideas to convey nanochemistry in an engaging way to students

Challenges of a Changing Earth Will Steffen, Jill Jäger, David J. Carson, Clare Bradshaw, 2002-10-08 This volume is based on plenary presentations from Challenges of a Changing Earth a Global Change Open Science Conference held in Amsterdam The Netherlands in July 2001 The meeting brought together about 1400 scientists from 105 countries around the world to describe discuss and debate the latest scientific

derstanding of natural and human driven changes to our planet It examined the effects of these changes on our societies and our lives and explored what the future might hold The presentations drew upon global change science from an exceptionally wide range of disciplines and approaches Issues of societal importance the food system air quality the carbon cycle and water resources were highlighted from both policy and science perspectives Many of the talks presented the exciting scientific advances of the past decade of international research on global change Several challenged the scientific community in the future What are the visionary and creative new approaches needed for studying a complex planetary system in which human activities are in mately interwoven with natural processes This volume aims to capture the timeliness and excitement of the science p sented in Amsterdam The plenary speakers were given a daunting task to reproduce their presentations in a way that delivers their scientific messages accurately and in sufficient detail but at the same time reaches a very broad audience well beyond their own disciplines Furthermore they were required to do this in just a few pages Hospital Outpatient & Emergency Activities
