The Afronmillennial Vision Bakam,2021-07-19 This is a thematic collection of sincere thoughts and opinions born out of deep convictions unique experiences and interesting observations from the author s childhood to youth and experiences of others Experiences at home in school on the street with friends from books etc Essentially the book is presented light heartedly in a conversational narrative and contemplative parlance Once in a while the temptation to use some technical jargons for connation presents itself and it is helplessly used in a casual but generally vivid language The book is intended to be a documentation a life shaped by a unique setting of time and place highlighting valuable deductions for the reader to consider even as the author makes attempt to step aside to critically view details of his life along the spectrum of time with a childlike curiosity but an adult s thoroughness Upgrading the Curriculum of the National Bureau of Statistics' Schools of Statistics at Enugu, Ibadan and Kaduna ,2007 **Journal of Social Sciences** ,2007-07 **Neural Masses and Fields:**

Modelling the Dynamics of Brain Activity Karl Friston,2015-05-25 Biophysical modelling of brain activity has a long and illustrious history and has recently profited from technological advances that furnish neuroimaging data at an unprecedented spatiotemporal resolution Neuronal modelling is a very active area of research with applications ranging from the characterization of neurobiological and cognitive processes to constructing artificial brains in silico and building brain machine interface and neuroprosthetic devices Biophysical modelling has always benefited from interdisciplinary interactions between different and seemingly distant fields ranging from mathematics and engineering to linguistics and psychology This Research Topic aims to promote such interactions by promoting papers that contribute to a deeper understanding of neural activity as measured by fMRI or electrophysiology In general mean field models of neural activity can be divided into two classes neural mass and neural field models The main difference between these classes is that field models prescribe how a quantity characterizing neural activity such as average depolarization of a neural population evolves over both space and time as opposed to mass models which characterize activity over time only by assuming that all neurons in a population are located at approximately the same point This Research Topic focuses on both classes of models and considers several aspects and their relative merits that span from synapses to the whole brain comparisons of their predictions with EEG and MEG spectra of spontaneous brain activity evoked responses seizures and fitting data to infer brain states and map physiological parameters Cognitive hearing science: Investigating the relationship between selective attention and brain activity Jerker Rönnerberg,Anu Sharma,Tom A. Next-Generation Neuroprostheses Timothée Levi,Paolo Bonifazi, Paolo Massobrio,Michela Chiappalone,2018-04-26 Millions of people worldwide are affected by neurological disorders which disrupt the connections within the brain and between brain and body causing impairments of primary functions and paralysis Such a number is likely to increase in the next years and current assistive technology is yet limited A possible response to such disabilities offered by the neuroscience

community is given by Brain Machine Interfaces BMIs and neuroprostheses The latter field of research is highly multidisciplinary since it involves very different and disperse scientific communities making it fundamental to create connections and to join research efforts Indeed the design and development of neuroprosthetic devices span involve different research topics such as interfacing of neural systems at different levels of architectural complexity from in vitro neuronal ensembles to human brain bio artificial interfaces for stimulation e g micro stimulation DBS Deep Brain Stimulation and recording e g EMG Electromyography EEG Electroencephalography LFP Local Field Potential innovative signal processing tools for coding and decoding of neural activity biomimetic artificial Spiking Neural Networks SNN and neural network modeling In order to develop functional communication with the nervous system and to create a new generation of neuroprostheses the study of closed loop systems is mandatory It has been widely recognized that closed loop neuroprosthetic systems achieve more favorable outcomes for users then equivalent open loop devices Improvements in task performance usability and embodiment have all been reported in systems utilizing some form of feedback The bi directional communication between living neurons and artificial devices is the main final goal of those studies However closed loop systems are still uncommon in the literature mostly due to requirement of multidisciplinary effort Therefore through eBook on closed loop systems for next generation neuroprostheses we encourage an active discussion among neurobiologists electrophysiologists bioengineers computational neuroscientists and neuromorphic engineers This eBook aims to facilitate this process by ordering the 25 contributions of this research in which we highlighted in three different parts A Optimization of different blocks composing the closed loop system B Systems for neuromodulation based on DBS EMG and SNN and C Closed loop BMIs for rehabilitation

Basal ganglia: physiological, behavioral, and computational studies Ahmed A. Moustafa, Alon Korngreen, Izhar Bar-Gad, Hagai Bergman, 2015-05-26 The basal ganglia has received much attention over the last two decades as it has been implicated in many neurological and psychiatric disorders Most of this research in both animals and humans attempt to understand the neural and biochemical substrates of basic motor and learning processes and how these are affected in human patients as well as animal models of brain disorders The current volume contains research articles and reviews describing basic pre clinical and clinical neuroscience research of the basal ganglia written by attendees of the 11th Triennial Meeting of the International Basal Ganglia Society IBAGS that was held March 3 7th 2013 at the Princess Hotel Eilat Israel and by researchers of the basal ganglia Specifically articles in this volume include research reports on the biochemistry computational theory anatomy and physiology of single neurons and functional circuitry of the basal ganglia networks as well as the latest data on animal models of basal ganglia dysfunction and clinical studies in human patients
