Green's Functions with Applications Dean G. Duffy, 2015-03-10 Since publication of the first edition over a decade ago Green s Functions with Applications has provided applied scientists and engineers with a systematic approach to the various methods available for deriving a Green s function This fully revised Second Edition retains the same purpose but has been meticulously updated to reflect the current state of the art The book opens with necessary background information a new chapter on the historical development of the Green s function coverage of the Fourier and Laplace transforms a discussion of the classical special functions of Bessel functions and Legendre polynomials and a review of the Dirac delta function The text then presents Green s functions for each class of differential equation ordinary differential wave heat and Helmholtz equations according to the number of spatial dimensions and the geometry of the domain Detailing step by step methods for finding and computing Green s functions each chapter contains a special section devoted to topics where Green s functions particularly are useful For example in the case of the wave equation Green s functions are beneficial in describing diffraction and waves To aid readers in developing practical skills for finding Green s functions worked examples problem sets and illustrations from acoustics applied mechanics antennas and the stability of fluids and plasmas are featured throughout the text A new chapter on numerical methods closes the book Included solutions and hundreds of references to the literature on the construction and use of Green s functions make Green s Functions with Applications Second Edition a valuable sourcebook for practitioners as well as graduate students in the sciences and engineering **Advanced Applications in**

Recent Advances in Radial Basis Function Collocation Methods Wen Chen, Zhuo-Jia Fu, C.S. Chen, 2013-11-09 This book surveys the latest advances in radial basis function RBF meshless collocation methods which emphasis on recent novel kernel RBFs and new numerical schemes for solving partial differential equations The RBF collocation methods are inherently free of integration and mesh and avoid tedious mesh generation involved in standard finite element and boundary element methods This book focuses primarily on the numerical algorithms engineering applications and highlights a large class of novel boundary type RBF

meshless collocation methods These methods have shown a clear edge over the traditional numerical techniques especially for problems involving infinite domain moving boundary thin walled structures and inverse problems Due to the rapid development in RBF meshless collocation methods there is a need to summarize all these new materials so that they are available to scientists engineers and graduate students who are interest to apply these newly developed methods for solving real world s problems This book is intended to meet this need Prof Wen Chen and Dr Zhuo Jia Fu work at Hohai University Prof C S Chen works at the University of Southern Mississippi
