- What is pain? A sensation that indicates that something is wrong with your body.
- How is it sent? It is transmitted via receptors in the body and then signals are sent to the brain.
- Why is it important? It is important because it alerts the body to a problem and indicates where should be.
- What are the receptors for pain and where are they located? The receptors for pain are called nociceptors and they are located in the skin and gut.
- What is referred pain? Why does it occur? Referred pain is pain that occurs in one location but is actually in another location. Referred pain occurs because nerves are connected to different areas.
