systems design     **Neuroscience, computing, performance, and benchmarks: Why it matters to neuroscience how fast we can compute** Felix Schürmann, Omar Awile, James Courtney Knight, Thomas Nowotny, James B. Aimone, Markus Diesmann, 2023-04-26     **Cognitive mechanisms for safe road traffic systems** Giovanni Vecchiato, Lewis L. Chuang, Christer Ahlström, 2022-12-16     Advances and Applications of DSMT for Information Fusion (Collected Works. Volume 5) Florentin Smarandache, Jean Dezert, Albena Tchamova, 2023-12-27

This fifth volume on Advances and Applications of DSMT for Information Fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics and is available in open access. The collected contributions of this volume have either been published or presented after disseminating the fourth volume in 2015 available at [fs.unm.edu/DSMTbook4.pdf](https://fs.unm.edu/DSMTbook4.pdf) or [www.onera.fr/sites/default/files/297\\_2015\\_DSMT\\_Book4.pdf](http://www.onera.fr/sites/default/files/297_2015_DSMT_Book4.pdf) in international conferences, seminars, workshops, and journals, or they are new. The contributions of each part of this volume are chronologically ordered. First Part of this book presents some theoretical advances on DSMT dealing mainly with modified Proportional Conflict Redistribution Rules (PCR) of combination with degree of intersection coarsening techniques, interval calculus for PCR thanks to set inversion via interval analysis (SIVIA), rough set classifiers, canonical decomposition of dichotomous belief functions, fast PCR fusion, fast inter-criteria analysis with PCR and improved PCR5 and PCR6 rules preserving the quasi-neutrality of quasi-vacuous belief assignment in the fusion of sources of evidence with their Matlab codes. Because more applications of DSMT have emerged in the past years since the apparition of the fourth book of DSMT in 2015, the second part of this volume is about selected applications of DSMT mainly in building change detection, object recognition, quality of data association in tracking, perception in robotics, risk assessment for torrent protection and multi-criteria decision making, multi-modal image fusion, coarsening techniques, recommender system, levee characterization and assessment, human heading perception, trust assessment, robotics, biometrics, failure detection, GPS systems, inter-criteria analysis, group decision, human activity recognition, storm prediction, data association for autonomous vehicles, identification of maritime vessels, fusion of support vector machines (SVM), Silx, Furtif, RUST code library for information fusion including PCR rules and network for ship classification. Finally, the third part presents interesting contributions related to belief functions in general, published or presented along the years since 2015. These contributions are related with decision making under uncertainty, belief approximations, probability transformations, new distances between belief functions, non-classical multi-criteria decision making problems with belief functions, generalization of Bayes theorem, image processing, data association, entropy and cross entropy measures, fuzzy evidence numbers, negator of belief mass, human activity recognition, information fusion for breast cancer therapy, imbalanced data classification, and hybrid techniques mixing deep learning with belief functions as well. We want to thank all the contributors of this fifth volume for their research works and their interests in the development of DSMT and the belief functions. We are grateful as well to other colleagues for encouraging us to edit this fifth volume and for sharing with us several ideas and for their questions and comments on DSMT.

through the years We thank the International Society of Information Fusion [www.isif.org](http://www.isif.org) for diffusing main research works related to information fusion including DSMT in the international fusion conferences series over the years Florentin Smarandache is grateful to The University of New Mexico U S A that many times partially sponsored him to attend international conferences workshops and seminars on Information Fusion Jean Dezert is grateful to the Department of Information Processing and Systems DTIS of the French Aerospace Lab Office National d Etudes et de Recherches Aérospatiales Palaiseau France for encouraging him to carry on this research and for its financial support Albena Tchamova is first of all grateful to Dr Jean Dezert for the opportunity to be involved during more than 20 years to follow and share his smart and beautiful visions and ideas in the development of the powerful Dezert Smarandache Theory for data fusion She is also grateful to the Institute of Information and Communication Technologies Bulgarian Academy of Sciences for sponsoring her to attend international conferences on Information Fusion

Constitutive Models for Rubber X Alexander Lion, Michael Jöhrlitz, 2017-08-15 In order to develop innovative products to reduce development costs and the number of prototypes and to accelerate development processes numerical simulations become more and more attractive As such numerical simulations are instrumental in understanding complicated material properties like chemical ageing crack propagation or the strain and temperature induced crystallisation of rubber Therefore experimentally validated and physically meaningful constitutive models are indispensable Elastomers are used for products like tyres engine and suspension mounts or seals to name a few The interest in modelling the quasi static stress strain behaviour was dominant in the past decades but nowadays the interests also include influences of environmental conditions The latest developments on the material behaviour of elastomers are collected in the present volume Constitutive Models for Rubber X is a comprehensive compilation of nearly all oral and poster contributions to the European Conference on Constitutive Models for Rubber Munich 28-31 August 2017 The 95 highly topical contributions reflect the state of the art in material modelling and testing of elastomers They cover the fields of material testing and processing filler reinforcement electromagnetic sensitive elastomers dynamic properties constitutive modelling micromechanics finite element implementation stress softening chemical ageing fatigue and durability In the area of rubbery materials and structures applied research will play an important role also in the coming decades Constitutive Models for Rubber X is of interest to developers and researchers involved in the rubber processing and CAE software industries as well as for academics in nearly all disciplines of engineering and material sciences

**Energy Efficiency in Buildings** José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO<sub>2</sub> per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge

nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
