Critical Care A Guide to Diagnosis and Therapeutics which appeared in 2005 filled an important need in the armamentarium of
the neurological neurosurgical and medical intensivists who deal with seriously ill patients in the ICU setting Unlike epilepsy
as it usually presents in the outpatient department seizures in ICU patients are nearly always secondary phenomena that
signify that something is seriously amiss in very ill patients with primary medical or surgical disease The job of the intensivist
is to identify the cause of the seizure or seizures examine the myriad of potential contributing factors and provide
appropriate management and treatment that takes all aspects of the patient's illness into consideration As in the first edition
Dr Varelas and his associates recognize the extreme importance of prompt recognition diagnosis and sophisticated
management of seizures in this group of seriously ill patients Dr Varelas has now recollected his group of contributors and
produced a new and up to date compendium of what one needs to know in order to work effectively in this difficult and
demanding area A welcome addition to the new edition is the chapter by Friedman and Hirsch on the role of continuous
monitoring in the ICU which is essential for the diagnosis and treatment of nonconvulsive seizures as these may be the most
common form of seizures in this setting but are often missed in the evaluation of patients in stupor or coma *Nursing*
