

PWVIA DIN P8 RJ45 POE VIA 8-Port DIN-mount Ethernet Switch

Installation Guide

OVERVIEW

The PWVIA DIN P8 is a DIN-mountable, managed gigabit Ethernet switch with eight copper ports and two mini-GBIC ports for SFP/SFP+ fiber modules.

This compact switch is designed specifically for sACN data distribution and is ideal for networks using Pathport Gateways, Choreo controllers, Cognito consoles and NSB or Vignette architectural wall stations, with Power-over-Ethernet support for up to 8 devices.

CONNECTIONS

POWER

The PWVIA DIN P8 is designed to run Class 3 PoE on ports 1-8. Typically most Pathport and Vignette devices are Class 2 or lower and a 100W 48VDC power supply (PWPWR DIN TERM 100W 48VDC) will supply enough power for the switch and 8 connected PoE devices. Observe correct polarity when wiring DC IN plug.

The earth ground terminal must be connected to the enclosure's chassis or electrical ground terminal to improve EMC compliance.

ETHERNET

All network wiring should follow standard Ethernet rules and be installed by a qualified person. As part of the installation, all wiring should be certified under the TIA/EIA-568 standard.

Pathway recommends the use of manufactured rather than hand-terminated cables. We also recommend PWAOC RJPATCH RJ45 patch accessories which come in lots of 4 and use 3.5" of rail space. These use standard punch-down female connectors and essentially build a patch bay in the DIN enclosure.

INSTALLATION

Disconnect all power before proceeding with installation.

Securely mount DIN rail (if not already installed in the enclosure). Hook the upper slots on the back of the plastic extrusion to the DIN rail and then gently but firmly press on the bottom front corners of the extrusion to snap the module onto the rail.

Connect the DC IN terminal, after checking that polarity is correct. The switch will boot up, which may take 15-20 seconds.

Attach required network cables to RJ45 ports. Connect the fiber module(s), if used.

The system is now ready for configuration and testing.

STATUS INDICATORS

PoE

After boot up, solid green indicates PoE is available. Off indicates power supply voltage is not sufficient to supply PoE capability. Flashing green indicates PoE External Supply value set to 0.

STATUS

Flashing blue (heartbeat) indicates power and processor OK, off indicates no power.

Fiber Port LEDs (9/10)

Green. Intermittent blinking indicates valid link to other device. Solid red indicates incompatible fiber transceiver.

RJ45 LEDs

Green & Amber. Solid green LED indicates PoE active on port. Intermittent blinking of amber LED indicates valid link to other device.

CONFIGURATION

For detailed instructions on operation of the PWVIA DIN P8, please see the PWVIA DIN manual available on the Pathway website.

All field configuration of VIA switches is recommended to be done with Pathscape software.

Download the software from www.pathwayconnect.com and install.

Before configuring and using the switch, you must add it to a Security Domain using Pathscape.

Set computer's IP to a static address in the 10.x.x.x range, with a subnet mask of 255.0.0.0 and default gateway of 10.0.0.1. No configuration of the computer's DNS settings should be required. Plug into the VIA8 and launch the software. Discovery will be automatic.

Refer to additional VIA and Pathscape documentation for description of configuration options.
