**Neurochemical Aspects of Hypothalamic Function** L Martini, 2012-12-02 Neurochemical Aspects of Hypothalamic Function covers the proceedings of the Second International Meeting of the International Society for Neurochemistry held in Milan Italy on September 1969 The one day symposium focuses on the neurochemical aspects of hypothalamic function and their relation to secretion of anterior pituitary hormones This book contains seven chapters that emphasize the relationships among the effects of environmental stimuli and observable changes in catecholamines in the hypothalamus indoleamines in the pineal the hypophysiotropic hormones of the hypothalamus and secretion of anterior pituitary hormones This text further explores some important interactions between the external environment brain and anterior pituitary as well as feedback on the brain and anterior pituitary by body target organs with a particular emphasis on their function as a unit This book is an ideal source for neurochemists neurologists and researchers who are interested in the hypothalamic function

congress possible      *Evolution of Brain and Behavior in Vertebrates* R.B. Masterton, M.E. Bitterman, C.B.G. Campbell, Nicholas Hotton, 2018-02-19 Originally published in 1976 the object of this volume was to present a relatively up to date overview of what was known what was suspected and what remained to be discovered concerning the general question of the evolution of the vertebrate brain and behaviour and to present a list of references for those who wanted to delve deeper into one or another aspect of the problem Accordingly it contains chapters by palaeontologists sensory morphologists and physiologists comparative neurologists and comparative psychologists The chapters are arranged in a sequence loosely approximating the order in which the various animals brain structures or behaviour first appeared Therefore the chapters fall naturally into sections each section directed to a group of vertebrates beginning with those which have very remote common ancestry and progressing to those with more recent common ancestry with mankind      **Hormones, Homeostasis and the Brain**, 2011-09-21 Hormones Homeostasis and the Brain      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1972 First multi year cumulation covers six years 1965 70      **Central Regulation of the Pituitary-Adrenal Complex** E. V. Naumenko, 2013-03-09 This monograph gives an up to date account of the original results of the author s research in the complex field of the central control over relationships which have become established in the course of evolution between the hypothalamus and the pituitary gland The author has limited the scope of this research on logical grounds to the study of central chemically reactive structures in the regulation of the adrenal glands through the intermediary of the hypothalamo hypophyseal system Through the author s skill and expertise in the analysis of the extensive and sometimes complicated literature he has successfully undertaken a differential approach to the analysis of the concrete role of catecholamines acetylcholine and serotonin in relation to the endocrine system The vast range of experimental investigations and results of clinical observations published in the last few decades have revealed the humoral neurosecretory factors of the hypothalamus as important regulators of the principal functions of the pituitary gland and through it of the cyclic activity of the peripheral group of endocrine glands Until recently the region of the cascade of regulatory influences preceding the hypothalamus was terra incognita It is for this reason that Evgenii Vladimirovich Naumenko s monograph acquires its special importance for the neurophysiologist for its author has striven by the use of experimental methods to ascertain in detail the nature of influences which for a long time were interpreted as the general dogmas of an abstract nervism      **Neurobiological Bases of Abnormal Aggression and Violent Behaviour** József Haller, 2014-03-24 Mechanisms controlling aggressive behavior started to be identified from late 20 s of the 20th century and subsequent research described such mechanisms in great detail While the findings are of great relevance for the understanding of aggression per se they provide limited insights into the mechanisms of abnormal aggression i.e. those mechanisms that underlie aggression related psychopathologies While basic phenomena and mechanism of aggression are presented this book is the first that comprehensively describes ultimate and proximate mechanisms that transform normal

laboratory animals or tolerable humans manifestations of aggressiveness into abnormal patterns in laboratory animals and aggression related psychopathologies in humans This book is written for behavioral neurobiologists and neuroscientists interested in emotional control in general and aggression research in particular The book will also offer important information to neurologists and psychiatrists dealing with aggressive behavior in the clinic and ultimately may provide means to understand and on the long run to discover novel approaches to the treatment of abnormal human aggression

**Neurobiology of Aging** J. Ordy, 2013-06-29 Aging is one of the most universal and inevitable social and scientific challenges confronting man The lives of all multicellular organisms begin with conception extend through phases of development maturity senescence and finally end in death Man is no exception but has the unique feature of a complex brain It plays an integrative role in adaptation to the physical and social environments through reflexes conditioning and more complex forms of learning The brain is a repository for both inherited and acquired information With the development of speech and the formation of symbolic language the human brain has made it possible to transmit information culturally horizontal to other members of society in addition to genetic vertical transmission to progeny This horizontal transmission which has reached its highest form in man is a powerful extension of genetic transmission The brain may provide man all that is of importance in life It has played a key role in the evolution of life by maintaining and extending the life span Many mental or intellectual capacities of man reach a peak in early adulthood remain relatively constant throughout maturity and then appear to decline during senescence Behaviorally there appears to be a decrease in sensory learning and motor functions with aging in all mammalian species As integrated adaptive control systems the brain and neuroendocrines have been closely associated with the homeostatic adaptation to environmental challenges throughout the life span Clinical Endocrinology A. Labhart, 2012-12-06 Periodically in the evolution of an important branch of clinical medicine there develops a critical need for a textbook which combines with the clinical aspects of disease syndromes an in depth review of the sciences basic to the disorders discussed as well as a carefully selected but comprehensive review of pertinent literature LABHART'S Clinical Endocrinology revised and translated into English provides for this need in the field of endocrinology in an exemplary manner Prof LABHART has selected his individual authors with great care and they in turn have provided authoritative monographs An interesting useful and informative introduction to each chapter is provided by a tabulation of the dates of important or significant contributions to the field The chapter subdivisions present in great detail a wide variety of subjects such as embryology anatomy biochemistry physiology individual hormones and their analogues biosynthesis metabolism and regulation of hormone release as well as a full discussion of the clinico pathological correlations The bibliography is unusually extensive and will provide an important source book for all investigators and students in the field

Advances in Clinical Andrology C.L.R Barratt, I.D. Cooke, 2012-12-06 Infertility is a problem for the couple and evaluation of the couple is preferable in a clinic where both males and females may be seen together The contribution to care by the

urologist and the gynaecologist each with an interest in infertility is different but complementary My appreciation of this was sharpened between 1976 and 1985 during my association with the World Health Organization's Special Programme of Research Development and Research Training in Human Reproduction at the meetings of the Steering Committee of its Task Force on Infertility The deliberations of this group were aimed at developing a protocol for investigation of the infertile couple and it became apparent to me as a gynaecologist how important is the precise characterization of the male partner's role to the formulation of the management plan for the infertile couple To improve the quality of our evaluation of the male partner our technical staff were trained in the semen methodology of the laboratory of Dr F Comhaire of Ghent and we were joined by Dr CLR Barratt male reproductive biologist It seemed appropriate to share our enthusiasm for clinical andrology so after discussion with Dr Comhaire and Professor T Glover an eminent male reproductive biologist then of Brisbane who planned a sabbatical to his native was arranged for 1 and 2 May 1986 Professor Glover in Yorkshire a meeting of the meeting
