A Cultural History of Dress and Fashion in the Renaissance Elizabeth Currie, 2018-11-01 Spurred by an increasingly international and competitive market the Renaissance saw the development of many new fabrics and the use of highly prized ingredients imported from the New World In response to a thirst for the new fashion s pace of change accelerated the production of garments provided employment for an increasingly significant proportion of the working population and entrepreneurial artisans began to transform even the most functional garments into fashionable ones Anxieties concerning vanity and the power of clothing to mask identities heightened fears of fashion s corrupting influence and heralded the great age of sumptuary legislation intended to police status and gender through dress Drawing on sources from surviving garments to artworks to moralising pamphlets this richly illustrated volume presents essays on textiles

production and distribution the body belief gender and sexuality status ethnicity and visual and literary representations to illustrate the diversity and cultural significance of dress and fashion in the period *Encyclopedia of Renewable and Sustainable Materials* ,2020-01-09 Encyclopedia of Renewable and Sustainable Materials Five Volume Set provides a comprehensive overview covering research and development on all aspects of renewable recyclable and sustainable materials The use of renewable and sustainable materials in building construction the automotive sector energy textiles and others can create markets for agricultural products and additional revenue streams for farmers as well as significantly reduce carbon dioxide CO₂ emissions manufacturing energy requirements manufacturing costs and waste This book provides researchers students and professionals in materials science and engineering with tactics and information as they face increasingly complex challenges around the development selection and use of construction and manufacturing materials Covers a broad range of topics not available elsewhere in one resource Arranged thematically for ease of navigation Discusses key features on processing use application and the environmental benefits of renewable and sustainable materials Contains a special focus on sustainability that will lead to the reduction of carbon emissions and enhance protection of the natural environment with regard to sustainable materials *Soybean* Minobu Kasai,2017-05-03 Soybean is one of the organisms largely contributing to our life Therefore it is important to know soybean from various aspects The knowledge and soybean itself will be greatly useful if they are soundly used The chapters constituting this book present reviews and researches especially concerning the basis of yield biomass and productivity in soybean Yield biomass and productivity in plants are some of the bases for maintaining or improving our ecosystem which includes our life and surrounding environments Therefore this book is expected to be useful for many people Of course more researches and investigations are important to further gain the knowledge concerning the basis of yield biomass and productivity and make them useful for our ecosystem **Physico-chemical Aspects of Textile Coloration** Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular

forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
